

## COURSE OVERVIEW EE0592 Transformer Oil Analysis

### Course Title

Transformer Oil Analysis

### Course Reference

EE0592

### Course Duration/Credits

Five days/3.0 CEUs/30 PDHs

### Course Date/Venue

Session(s)	Date	Venue
1	February 08-12, 2026	Meeting Plus 9, City Centre Rotana, Doha Qatar
2	May 17-21, 2026	Tamra Meeting Room, Al Bandar Rotana Creek, Dubai UAE
3	August 10-14, 2026	Glasshouse Meeting Room, Grand Millennium Al Wahda Hotel, Abu Dhabi, UAE
4	November 01-05, 2026	Crowne Meeting Room, Crowne Plaza Al Khobar, KSA

### Course Description

***This practical and highly-interactive course includes real-life case studies and exercises where participants will be engaged in a series of interactive small groups and class workshops.***

This course is designed to provide participants with detailed and up-to-date overview of Transformer Oil Analysis. It covers the importance, types and basic principles of transformer oil analysis; the proper sampling techniques and handling and transporting samples; the importance of dissolved gas analysis (DGA); identifying high, medium, and low-risk levels and interpreting DGA results; the Duval triangle analysis, critical conditions in oil samples and the impact of extreme conditions on transformer performance; the preventative and corrective actions and oil quality testing methods; and the condition monitoring techniques for transformer.

During this interactive course, participants will learn to link test results to transformer conditions and diagnose potential issues; the importance of Furan analysis; the impact of moisture content on transformer oil and performance; the methods for measuring moisture content; developing a maintenance plan and the importance of regular oil testing; the transformer oil reconditioning and replacement; managing oil contamination and risk; the advanced diagnostic tools for transformer analysis and online monitoring system; the data interpretation and trend analysis; the emerging technologies and methods of transformer oil analysis; and the impact of digitalization on oil analysis.

### Course Objectives

Upon the successful completion of this course, each participant will be able to: -

- Apply and gain an in-depth knowledge on transformer oil analysis
- Discuss transformer rating, types and configuration as well as cooling method, insulation class and impedance voltage
- Explain vector group, efficiency, tap changer, overload capacity and short-circuit withstand capability
- Recognize temperature rise, noise level, mounting and enclosure, weight and dimensions and other power transformer technical specifications
- Identify transformer oil properties and types and prevent arcing and corona discharge
- Carryout preventive measures, diagnostic methods and steps and risks levels in DGA
- Conduct transformer oil analysis including water content, dielectric strength and acidity or neutralization number (NN) as well as interfacial tension (IFT), IFT-NN relationship and quality index system
- Recognize the colour of transformer oil number and condition, quality index system, dissipation factor and evaluate transformer solid insulation
- Carryout dissolved gas analysis including test vessels, apparatus for measurement of interfacial tension (IFT), sampling and frequency of analysis (IEC 60567, IEC 60475)
- Employ duval triangle method following Dornenburg ratios and fault interpretation, Rogers ratios and Duval triangle and Duval pentagon methods
- Apply furanic analysis in transformers, analytical methods for furanic compounds and transformer condition monitoring
- Address identified risks after DGA and employ immediate actions for the worst case and preventive measures
- Recognize advanced diagnostic tools and future trends like moisture level of transformer insulation, frequency dielectric spectroscopy (FDS) method and sludge identification in transformer insulation
- Identify mechanical fault of windings and diagnose transformer bushings as well as new technologies in oil analysis
- Recognize the benefits of online monitoring, impact of digitalization on oil analysis and data interpretation and trend analysis
- Employ maintenance strategies for power transformers and oil management strategies and implement comprehensive maintenance program
- Carryout techniques of reconditioning transformer oil, criteria for oil replacement and common contaminants and their effects

### Exclusive Smart Training Kit - H-STK®

Participants of this course will receive the exclusive “Haward Smart Training Kit” (H-STK®). The H-STK® consists of a comprehensive set of technical content which includes **electronic version** of the course materials conveniently saved in a **Tablet PC**.

**Who Should Attend**

This course provides an overview of all significant aspects and considerations of transformer oil analysis for electrical engineers, maintenance technicians, reliability engineers, substation operators and technicians, asset managers, field service engineers, technical consultants and those who are involved with the operation, maintenance, and management of electrical transformers.

**Course Certificate(s)**

Internationally recognized certificates will be issued to all participants of the course who completed a minimum of 80% of the total tuition hours.

**Certificate Accreditations**

Certificates are accredited by the following international accreditation organizations:-

- 
British Accreditation Council (BAC)

Haward Technology is accredited by the **British Accreditation Council** for **Independent Further and Higher Education** as an **International Centre**. BAC is the British accrediting body responsible for setting standards within independent further and higher education sector in the UK and overseas. As a BAC-accredited international centre, Haward Technology meets all of the international higher education criteria and standards set by BAC.

- 
The International Accreditors for Continuing Education and Training (IACET - USA)

Haward Technology is an Authorized Training Provider by the International Accreditors for Continuing Education and Training (IACET), 2201 Cooperative Way, Suite 600, Herndon, VA 20171, USA. In obtaining this authority, Haward Technology has demonstrated that it complies with the **ANSI/IACET 2018-1 Standard** which is widely recognized as the standard of good practice internationally. As a result of our Authorized Provider membership status, Haward Technology is authorized to offer IACET CEUs for its programs that qualify under the **ANSI/IACET 2018-1 Standard**.

Haward Technology’s courses meet the professional certification and continuing education requirements for participants seeking **Continuing Education Units** (CEUs) in accordance with the rules & regulations of the International Accreditors for Continuing Education & Training (IACET). IACET is an international authority that evaluates programs according to strict, research-based criteria and guidelines. The CEU is an internationally accepted uniform unit of measurement in qualified courses of continuing education.

Haward Technology Middle East will award **3.0 CEUs** (Continuing Education Units) or **30 PDHs** (Professional Development Hours) for participants who completed the total tuition hours of this program. One CEU is equivalent to ten Professional Development Hours (PDHs) or ten contact hours of the participation in and completion of Haward Technology programs. A permanent record of a participant’s involvement and awarding of CEU will be maintained by Haward Technology. Haward Technology will provide a copy of the participant’s CEU and PDH Transcript of Records upon request.

**Course Instructor(s)**

This course will be conducted by the following instructor(s). However, we have the right to change the course instructor(s) prior to the course date and inform participants accordingly:

**Dr. Ahmed El-Sayed, PhD, MSc, BSc, is a Senior Electromechanical Engineer with over 35 years of extensive experience in the Power, Petroleum, Petrochemical and Utilities. He specializes in HV/LV Equipment, High Voltage Electrical Safety, LV & HV Electrical System, HV Equipments Inspection Maintenance, HV Switchgear Operation & Maintenance, LV Distribution Switchgear & Equipment, HV Switchgear Maintenance, HV/LV Electrical Authorisation, Hazardous Area Classification, Power Quality, Disturbance Analysis, Blackout, Power Network, Power Distribution, Power Systems Control, Power Systems Security, Power Electronics, ETAP, Electrical Substations, Tariff Design, Structure Analysis, Engineering Drawings, Codes & Standards, P&ID Reading Interpretation & Developing, PLC, SCADA, DCS, Process Control, Instrumentation Automation, Power Generation, Process Control Instrumentation, SIS, SIL, ESD, Alarm Management Systems, Fieldbus Systems and Fiber Optics as well as the service pricing of these. Further, he is also well versed in Pumps, Valves, Boilers, Pressure Vessels, Heat Recovery Steam Generators (HRSG), Bearings, Compressors, Motors, Turbine Actuators, Carbon Footprint, Energy Efficiency, Power Plant Performance & Efficiency P&ID, Engineering Drawing, Codes & Standards and Hydraulic Systems He is currently the Systems Control Manager of Siemens where he is in-charge of Security & Control Power Transmission Distribution & High Voltage Systems and he further takes part in the Load Records Evaluation & Transmission Services Pricing.**

During his career life, Dr. Ahmed has been actively involved in different Power System Activities including Roles in Power System Planning, Analysis, Engineering, HV Substation Design, Electrical Service Pricing, Evaluations & Tariffs, Project Management and also Teaching and Consulting. His vast industrial experience was honed greatly when he joined many International and National Companies such as Siemens, Electricity Authority and ACETO industries where he focused more on dealing with Technology Transfer, System Integration Process and Improving Localization. He was further greatly involved in manufacturing some of Power System and Control & Instrumentation Components such as Series of Digital Protection Relays, MV VFD, PLC and SCADA System with intelligent features.

Dr. Ahmed is well-versed in different electrical and instrumentation fields like Load Management Concepts, PLC Programming, Installation, Operation and Troubleshooting, Motor Drives Theory, Application and Troubleshooting, Industrial Power Systems Analysis, AC & DC Motors, Electric Motor Protection, DCS SCADA, Control and Maintenance Techniques, Industrial Intelligent Control System, Power Quality Standards, Power Generators and Voltage Regulators, Circuit Breaker and Switchgear Application and Testing Techniques, Transformer and Switchgear Application, Grounding for Industrial and Commercial Assets, Power Quality and Harmonics, Protective Relays (O/C Protection, Line Differential, Bus Bar Protection and Breaker Failure Relay) and Project Management Basics (PMB).

Dr. Ahmed has PhD, Master's & Bachelor's degree in Electrical and Instrumentation Engineering from the University of Wisconsin Madison, USA. Further, he has numerous papers published internationally in the areas of Power Quality, Superconductive Magnetic Energy Storage, SMES role in Power Systems, Power System Blackout Analysis, and Intelligent Load Shedding Techniques for preventing Power System Blackouts, HV Substation Automation and Power System Stability.

**Training Methodology**

All our Courses are including **Hands-on Practical Sessions** using equipment, State-of-the-Art Simulators, Drawings, Case Studies, Videos and Exercises. The courses include the following training methodologies as a percentage of the total tuition hours:-

- 30% Lectures
- 20% Practical Workshops & Work Presentations
- 30% Hands-on Practical Exercises & Case Studies
- 20% Simulators (Hardware & Software) & Videos

In an unlikely event, the course instructor may modify the above training methodology before or during the course for technical reasons.

**Course Fee**

Doha	<b>US\$ 6,000</b> per Delegate. This rate includes H-STK® (Haward Smart Training Kit), buffet lunch, coffee/tea on arrival, morning & afternoon of each day.
Dubai	<b>US\$ 5,500</b> per Delegate + <b>VAT</b> . This rate includes H-STK® (Haward Smart Training Kit), buffet lunch, coffee/tea on arrival, morning & afternoon of each day.
Abu Dhabi	<b>US\$ 5,500</b> per Delegate + <b>VAT</b> . This rate includes H-STK® (Haward Smart Training Kit), buffet lunch, coffee/tea on arrival, morning & afternoon of each day.
Al Khobar	<b>US\$ 5,500</b> per Delegate + <b>VAT</b> . This rate includes H-STK® (Haward Smart Training Kit), buffet lunch, coffee/tea on arrival, morning & afternoon of each day.

**Accommodation**

Accommodation is not included in the course fees. However, any accommodation required can be arranged at the time of booking.

**Course Program**

The following program is planned for this course. However, the course instructor(s) may modify this program before or during the course for technical reasons with no prior notice to participants. Nevertheless, the course objectives will always be met:

**Day 1**

0730 – 0800	Registration & Coffee
0800 – 0815	Welcome & Introduction
0815 – 0830	<b>PRE-TEST</b>
0830 - 0930	<b>Power Transformer Technical Specifications</b> Transformer Rating • Transformer Type and Configuration • Notes on Cooling Method • Insulation Class • Impedance Voltage
0930 - 0945	Break
0945 – 1045	<b>Power Transformer Technical Specifications (cont'd)</b> Vector Group • Efficiency • Tap Changer • Overload Capacity • Short-Circuit Withstand Capability
1045 - 1215	<b>Power Transformer Technical Specifications (cont'd)</b> Temperature Rise • Noise Level • Mounting and Enclosure • Weight and Dimensions
1215 - 1230	Break

1230 - 1430	<b>Power Transformer Technical Specifications (cont'd)</b> Insulation Material • Standards and Compliance • Accessories and Features • Testing and Quality Assurance • Warranty and Service
1420 - 1430	<b>Recap</b>
1430	Lunch & End of Day One

**Day 2**

0730 - 0930	<b>Transformer Oil &amp; Types of Oils</b> Transformer Oil Properties • Transformer Oil Types • Prevention of Arcing • Prevention of Corona Discharge
0930 - 0945	Break
0945 - 1045	<b>Transformer Oil &amp; Types of Oils (cont'd)</b> Preventive Measures • Diagnostic Methods • Practical Steps and Risk Levels in DGA • In-Depth Analysis of DGA Results
1045 - 1215	<b>A Guide to Transformer Oil Analysis</b> Water Content • Dielectric Strength • Acidity or Neutralization NUMBER(NN) •
1215 - 1230	Break
1230 - 1420	<b>A Guide to Transformer Oil Analysis (cont'd)</b> Interfacial Tension (IFT) • IFT-NN Relationship • Quality Index System
1420 - 1430	<b>Recap</b>
1430	Lunch & End of Day Two

**Day 3**

0730 - 0900	<b>A Guide to Transformer Oil Analysis (cont'd)</b> Color of Transformer Oil Number and Condition • Quality Index System • Dissipation Factor • Evaluation of Transformer Solid Insulation
0900 - 0915	Break
0915 - 1045	<b>A Dissolved Gas Analysis</b> Test Vessels • Apparatus for Measurement of Interfacial Tension (IFT) • Sampling and Frequency of Analysis (IEC 60567, IEC 60475) • TOA L1 Limits and Generation Rate Per Month Alarm Limits are based loosely on IEC 60599 • Some Transformer Problems
1045 - 1245	<b>Duval Triangle Method</b> Dornenburg Ratios • Dornenburg Ratios and Fault Interpretation • Rogers Ratios • Duval Triangle & Duval Pentagon Methods • Example Calculation and Interpretation
1245 - 1300	Break
1300 - 1420	<b>Condition Monitoring</b> Furanic Analysis in Transformers • Notes on Hydrolysis • Analytical Methods for Furanic Compounds • Significance in Transformer Condition Monitoring
1420 - 1430	<b>Recap</b>
1430	Lunch & End of Day Three

**Day 4**

0730 - 0930	<b>Strategies Addressing Identified Risks After DGA</b> Worst Case Scenario in DGA • Consequences of Worst-Case DGA Results • Immediate Actions for the Worst Case • Preventive Measures to Worst Case
0930 - 0945	Break
0945 - 1145	<b>Strategies Addressing Identified Risks After DGA (cont'd)</b> Strategies • Common Issues • Specific Gases and Their Indicative Faults • Addressing Common Issues • Interpretation of Hydrogen Levels

1145 - 1245	<b>Advanced Diagnostic Tools &amp; Future Trends</b> Moisture Level of Transformer Insulation • FDS Method (Frequency Dielectric Spectroscopy) • RVM-PDC Method • Sludge Identification in Transformer Insulation
1245 - 1300	Break
1300 - 1420	<b>Advanced Diagnostic Tools &amp; Future Trends (cont'd)</b> Identification of Mechanical Fault of Windings • Diagnostic of Transformer Bushings • New Technologies in Oil Analysis
1420 - 1430	<b>Recap</b>
1430	Lunch & End of Day Four

**Day 5**

0730 - 0830	<b>Advanced Diagnostic Tools &amp; Future Trends (cont'd)</b> Benefits of Online Monitoring • Impact of Digitalization on Oil Analysis • Data Interpretation and Trend Analysis
0830 - 0845	Break
0845 - 1045	<b>Maintenance Strategies &amp; Oil Management</b> Maintenance Strategies for Power Transformers • Oil Management Strategies • Implementing a Comprehensive Maintenance Program • Techniques of Reconditioning Transformer Oil
1045 - 1245	<b>Maintenance Strategies &amp; Oil Management(cont'd)</b> Criteria for Oil Replacement • Practical Steps for Oil Management • Common Contaminants and Their Effects
1245 - 1300	Break
1300 - 1345	<b>Maintenance Strategies &amp; Oil Management(cont'd)</b> Strategies for Contamination Control • Maintenance Schedule • Maintenance Schedule - Example
1345 - 1400	<b>Course Conclusion</b>
1400 - 1415	<b>POST-TEST</b>
1415 - 1430	Presentation of Course Certificates
1430	Lunch & End of Course

**Practical Sessions**

This practical and highly-interactive course includes real-life case studies and exercises:-

**Course Coordinator**

Reem Dergham, Tel: +974 4423 1327, Email: [reem@haward.org](mailto:reem@haward.org)
