COURSE OVERVIEW EE0592
Transformer Oil Analysis

Course Title
Transformer Oil Analysis

Course Reference
EE0592

Course Duration/Credits
Five days/3.0 CEUs/30 PDHs

3.0 CEUs (30 PDHs) AWARD

Course Date/Venue

Session(s)	Date	Venue
1	February 08-12, 2026	Meeting Plus 9, City Centre Rotana, Doha Qatar
2	May 17-21, 2026	Tamra Meeting Room, Al Bandar Rotana Creek, Dubai UAE
3	August 10-14, 2026	Glasshouse Meeting Room, Grand Millennium Al Wahda Hotel, Abu Dhabi, UAE
4	November 01-05, 2026	Crowne Meeting Room, Crowne Plaza Al Khobar, KSA

Course Description

This practical and highly-interactive course includes real-life case studies and exercises where participants will be engaged in a series of interactive small groups and class workshops.

This course is designed to provide participants with detailed and up-to-date overview of Transformer Oil Analysis. It covers the importance, types and basic principles of transformer oil analysis; the proper sampling techniques and handling and transporting samples; the importance of dissolved gas analysis (DGA); identifying high, medium, and low-risk levels and interpreting DGA results; the Duval triangle analysis, critical conditions in oil samples and the impact of extreme conditions on transformer performance; the preventative and corrective actions and oil quality testing methods; and the condition monitoring techniques for transformer.

During this interactive course, participants will learn to link test results to transformer conditions and diagnose potential issues; the importance of Furan analysis; the impact of moisture content on transformer oil and performance; the methods for measuring moisture content; developing a maintenance plan and the importance of regular oil testing; the transformer oil reconditioning and replacement; managing oil contamination and risk; the advanced diagnostic tools for transformer analysis and online monitoring system; the data interpretation and trend analysis; the emerging technologies and methods of transformer oil analysis; and the impact of digitalization on oil analysis.

Course Objectives

Upon the successful completion of this course, each participant will be able to: -

- Apply and gain an in-depth knowledge on transformer oil analysis
- Discuss transformer rating, types and configuration as well as cooling method, insulation class and impedance voltage
- Explain vector group, efficiency, tap changer, overload capacity and short-circuit withstand capability
- Recognize temperature rise, noise level, mounting and enclosure, weight and dimensions and other power transformer technical specifications
- Identify transformer oil properties and types and prevent arcing and corona discharge
- Carryout preventive measures, diagnostic methods and steps and risks levels in DGA
- Conduct transformer oil analysis including water content, dielectric strength and acidity or neutralization number (NN) as well as interfacial tension (IFT), IFT-NN relationship and quality index system
- Recognize the colour of transformer oil number and condition, quality index system, dissipation factor and evaluate transformer solid insulation
- Carryout dissolved gas analysis including test vessels, apparatus for measurement of interfacial tension (IFT), sampling and frequency of analysis (IEC 60567, IEC 60475)
- Employ duval triangle method following Dornenburg ratios and fault interpretation, Rogers ratios and Duval triangle and Duval pentagon methods
- Apply furanic analysis in transformers, analytical methods for furanic compounds and transformer condition monitoring
- Address identified risks after DGA and employ immediate actions for the worst case and preventive measures
- Recognize advanced diagnostic tools and future trends like moisture level of transformer insulation, frequency dielectric spectroscopy (FDS) method and sludge identification in transformer insulation
- Identify mechanical fault of windings and diagnose transformer bushings as well as new technologies in oil analysis
- Recognize the benefits of online monitoring, impact of digitalization on oil analysis and data interpretation and trent analysis
- Employ maintenance strategies for power transformers and oil management strategies and implement comprehensive maintenance program
- Carryout techniques of reconditioning transformer oil, criteria for oil replacement and common contaminants and their effects

Exclusive Smart Training Kit - H-STK®

*Participants of this course will receive the exclusive "Haward Smart Training Kit" (**H-STK®**). The **H-STK®** consists of a comprehensive set of technical content which includes **electronic version** of the course materials conveniently saved in a **Tablet PC**.*

Who Should Attend

This course provides an overview of all significant aspects and considerations of transformer oil analysis for electrical engineers, maintenance technicians, reliability engineers, substation operators and technicians, asset managers, field service engineers, technical consultants and those who are involved with the operation, maintenance, and management of electrical transformers.

Course Certificate(s)

Internationally recognized certificates will be issued to all participants of the course who completed a minimum of 80% of the total tuition hours.

Certificate Accreditations

Certificates are accredited by the following international accreditation organizations:-

- British Accreditation Council (BAC)

  Haward Technology is accredited by the **British Accreditation Council** for **Independent Further and Higher Education** as an **International Centre**. BAC is the British accrediting body responsible for setting standards within independent further and higher education sector in the UK and overseas. As a BAC-accredited international centre, Haward Technology meets all of the international higher education criteria and standards set by BAC.

- The International Accreditors for Continuing Education and Training (IACET - USA)

  Haward Technology is an Authorized Training Provider by the International Accreditors for Continuing Education and Training (IACET), 2201 Cooperative Way, Suite 600, Herndon, VA 20171, USA. In obtaining this authority, Haward Technology has demonstrated that it complies with the **ANSI/IACET 2018-1 Standard** which is widely recognized as the standard of good practice internationally. As a result of our Authorized Provider membership status, Haward Technology is authorized to offer IACET CEUs for its programs that qualify under the **ANSI/IACET 2018-1 Standard**.

  Haward Technology's courses meet the professional certification and continuing education requirements for participants seeking **Continuing Education Units** (CEUs) in accordance with the rules & regulations of the International Accreditors for Continuing Education & Training (IACET). IACET is an international authority that evaluates programs according to strict, research-based criteria and guidelines. The CEU is an internationally accepted uniform unit of measurement in qualified courses of continuing education.

  Haward Technology Middle East will award **3.0 CEUs** (Continuing Education Units) or **30 PDHs** (Professional Development Hours) for participants who completed the total tuition hours of this program. One CEU is equivalent to ten Professional Development Hours (PDHs) or ten contact hours of the participation in and completion of Haward Technology programs. A permanent record of a participant's involvement and awarding of CEU will be maintained by Haward Technology. Haward Technology will provide a copy of the participant's CEU and PDH Transcript of Records upon request.

Course Instructor(s)

This course will be conducted by the following instructor(s). However, we have the right to change the course instructor(s) prior to the course date and inform participants accordingly:

Dr. Ahmed El-Sayed, PhD, MSc, BSc, is a **Senior Electromechanic Engineer** with over **35 years** of extensive experience in the **Power**, **Petroleu Petrochemical** and **Utilities**. He specializes in **HV/LV Equipment**, **High Volta Electrical Safety**, **LV & HV Electrical System**, **HV Equipments Inspection Maintenance**, **HV Switchgear Operation & Maintenance**, **LV Distributi Switchgear & Equipment**, **HV Switchgear Maintenance**, **HV/LV Electric** Authorisation, **Hazardous Area Classification, Power Quality**, **Disturban Analysis**, **Blackout**, **Power Network**, **Power Distribution**, **Power Systems Control**, **Pow Systems Security**, Power **Electronics**, **ETAP**, Electrical **Substations**, Tariff Design Structure Analysis, **Engineering Drawings, Codes & Standards**, **P&ID Readir Interpretation & Developing**, **PLC**, **SCADA**, **DCS**, **Process Control**, **Instrumentatic Automation**, Power **Generation**, **Process Control Instrumentation**, **SIS**, **SIL**, **ESD**, **Ala Management Systems**, **Fieldbus Systems** and **Fiber Optics** as well as the service pricing these. Further, he is also well versed in **Pumps**, **Valves**, **Boilers**, **Pressure Vessels**, **He Recovery Steam Generators** (**HRSG**), **Bearings**, **Compressors**, **Motors**, **Turbine Actuators**, **Carbon Footprint**, **Energy Efficiency**, **Power Plant Performance & Efficienc P&ID**, **Engineering Drawing**, **Codes & Standards** and **Hydraulic Systems** He is curren the **Systems Control Manager** of **Siemens** where he is in-charge of Security & Control Power **Transmission Distribution** & **High Voltage** Systems and he further takes part in t Load Records Evaluation & Transmission Services Pricing.

During his career life, Dr. Ahmed has been actively involved in different Power Syste Activities including Roles in Power System Planning, Analysis, Engineering, **HV Substati** Design, Electrical Service Pricing, Evaluations & Tariffs, Project Management and also Teaching and Consulting. His vast industrial experience was honed greatly when he join many International and National Companies such as **Siemens**, **Electricity Authority** a **ACETO** industries where he focused more on dealing with Technology Transfer, Syste Integration Process and Improving Localization. He was further greatly involved manufacturing some of **Power System** and **Control & Instrumentation Components** such Series of Digital Protection **Relays**, MV **VFD**, **PLC** and **SCADA** System with intellige features.

Dr. Ahmed is well-versed in different electrical and instrumentation fields like Lo Management Concepts, **PLC** Programming, Installation, Operation and Troubleshooting, **A Drives** Theory, Application and Troubleshooting, Industrial Power Systems Analysis, AC & D **Motors**, Electric Motor **Protection**, **DCS SCADA**, **Control** and Maintenance Technique Industrial Intelligent Control System, **Power Quality** Standards, Power Generators and Volta Regulators, Circuit Breaker and Switchgear Application and Testing Techniques, **Transform** and **Switchgear** Application, Grounding for Industrial and Commercial Assets, Power Qual and **Harmonics**, **Protective Relays** (O/C Protection, Line Differential, Bus Bar Protection a **Breaker Failure Relay**) and Project Management Basics (PMB).

Dr. Ahmed has **PhD**, **Master's** & **Bachelor's** degree in **Electrical** and **Instrumentati Engineering** from the **University of Wisconsin Madison**, **USA**. Further, he has numero papers published internationally in the areas of Power Quality, Superconductive Magne Energy Storage, SMES role in Power Systems, Power System **Blackout** Analysis, a Intelligent Load Shedding Techniques for preventing Power System Blackouts, HV **Substati Automation** and Power System Stability.

Training Methodology

All our Courses are including **Hands-on Practical Sessions** using equipment, State-of-the-Art Simulators, Drawings, Case Studies, Videos and Exercises. The courses include the following training methodologies as a percentage of the total tuition hours:-

30% Lectures
20% Practical Workshops & Work Presentations
30% Hands-on Practical Exercises & Case Studies
20% Simulators (Hardware & Software) & Videos

In an unlikely event, the course instructor may modify the above training methodology before or during the course for technical reasons.

Course Fee

US$ 5,500 per Delegate + **VAT**. This rate includes H-STK® (Haward Smart Training Kit), buffet lunch, coffee/tea on arrival, morning & afternoon of each day.

Accommodation

Accommodation is not included in the course fees. However, any accommodation required can be arranged at the time of booking.

Course Program

The following program is planned for this course. However, the course instructor(s) may modify this program before or during the course for technical reasons with no prior notice to participants. Nevertheless, the course objectives will always be met:

Day 1

0730 – 0800	*Registration & Coffee*
0800 – 0815	*Welcome & Introduction*
0815 – 0830	***PRE-TEST***
0830 - 0930	***Power Transformer Technical Specifications*** *Transformer Rating • Transformer Type and Configuration • Notes on Cooling Method • Insulation Class • Impedance Voltage*
0930 - 0945	*Break*
0945 – 1045	***Power Transformer Technical Specifications (cont'd)*** *Vector Group • Efficiency • Tap Changer • Overload Capacity • Short-Circuit Withstand Capability*
1045 - 1215	***Power Transformer Technical Specifications (cont'd)*** *Temperature Rise • Noise Level • Mounting and Enclosure • Weight and Dimensions*
1215 - 1230	*Break*
1230 - 1430	***Power Transformer Technical Specifications (cont'd)*** *Insulation Material • Standards and Compliance • Accessories and Features • Testing and Quality Assurance • Warranty and Service*
1420 – 1430	***Recap***
1430	*Lunch & End of Day One*

Day 2

0730 – 0930	***Transformer Oil & Types of Oils*** *Transformer Oil Properties • Transformer Oil Types • Prevention of Arcing • Prevention of Corona Discharge*
0930 - 0945	*Break*

0945 - 1045	***Transformer Oil & Types of Oils (cont'd)*** *Preventive Measures • Diagnostic Methods • Practical Steps and Risk Levels in DGA • In-Depth Analysis of DGA Results*
1045 - 1215	***A Guide to Transformer Oil Analysis*** *Water Content • Dielectric Strength • Acidity or Neutralization NUMBER(NN) •*
1215 – 1230	*Break*
1230 - 1420	***A Guide to Transformer Oil Analysis (cont'd)*** *Interfacial Tension (IFT) • IFT-NN Relationship • Quality Index System*
1420 – 1430	***Recap***
1430	*Lunch & End of Day Two*

Day 3

0730 – 0900	***A Guide to Transformer Oil Analysis (cont'd)*** *Color of Transformer Oil Number and Condition • Quality Index System • Dissipation Factor • Evaluation of Transformer Solid Insulation*
0900 - 0915	*Break*
0915 - 1045	***A Dissolved Gas Analysis*** *Test Vessels • Apparatus for Measurement of Interfacial Tension (IFT) • Sampling and Frequency of Analysis (IEC 60567, IEC 60475) • TOA L1 Limits and Generation Rate Per Month Alarm Limits are based loosely on IEC 60599 • Some Transformer Problems*
1045 - 1245	***Duval Triangle Method*** *Dornenburg Ratios • Dornenburg Ratios and Fault Interpretation • Rogers Ratios • Duval Triangle & Duval Pentagon Methods • Example Calculation and Interpretation*
1245 - 1300	*Break*
1300 -1420	***Condition Monitoring*** *Furanic Analysis in Transformers • Notes on Hydrolysis • Analytical Methods for Furanic Compounds • Significance in Transformer Condition Monitoring*
1420 – 1430	***Recap***
1430	*Lunch & End of Day Three*

Day 4

0730 – 0930	***Strategies Addressing Identified Risks After DGA*** *Worst Case Scenario in DGA • Consequences of Worst-Case DGA Results • Immediate Actions for the Worst Case • Preventive Measures to Worst Case*
0930 – 0945	*Break*
0945 - 1145	***Strategies Addressing Identified Risks After DGA (cont'd)*** *Strategies • Common Issues • Specific Gases and Their Indicative Faults • Addressing Common Issues • Interpretation of Hydrogen Levels*
1145 - 1245	***Advanced Diagnostic Tools & Future Trends*** *Moisture Level of Transformer Insulation • FDS Method (Frequency Dielectric Spectroscopy) • RVM-PDC Method • Sludge Identification in Transformer Insulation*
1245 - 1300	*Break*
1300 - 1420	***Advanced Diagnostic Tools & Future Trends (cont'd)*** *Identification of Mechanical Fault of Windings • Diagnostic of Transformer Bushings • New Technologies in Oil Analysis*
1420 – 1430	***Recap***
1430	*Lunch & End of Day Four*

Day 5

0730 – 0830	***Advanced Diagnostic Tools & Future Trends (cont'd)*** *Benefits of Online Monitoring • Impact of Digitalization on Oil Analysis • Data Interpretation and Trent Analysis*
0830 - 0845	*Break*
0845 – 1045	***Maintenance Strategies & Oil Management*** *Maintenance Strategies for Power Transformers • Oil Management Strategies • Implementing a Comprehensive Maintenance Program • Techniques of Reconditioning Transformer Oil*
1045 - 1245	***Maintenance Strategies & Oil Management(cont'd)*** *Criteria for Oil Replacement • Practical Steps for Oil Management • Common Contaminants and Their Effects*
1245 - 1300	*Break*
1300 - 1345	***Maintenance Strategies & Oil Management(cont'd)*** *Strategies for Contamination Control • Maintenance Schedule • Maintenance Schedule – Example*
1345 – 1400	***Course Conclusion***
1400 – 1415	***POST-TEST***
1415 – 1430	*Presentation of Course Certificates*
1430	*Lunch & End of Course*

Practical Sessions

This practical and highly-interactive course includes real-life case studies and exercises:-

Course Coordinator

Reem Dergham, Tel: +974 4423 1327, Email: reem@haward.org
