

COURSE OVERVIEW ME0795 **Gas Turbine Operation & Maintenance**

Course Title

Gas Turbine Operation & Maintenance

Course Date/Venue

Session 1: June 07-11, 2026/Meeting Plus 8, City Centre Rotana Doha Hotel, Doha, Qatar

Session 2: November 08- 12, 2026/Meeting Plus 8, City Centre Rotana Doha Hotel, Doha, Qatar

Course Reference

ME0795

Course Duration/Credits

Five days/3.0 CEUs/30 PDHs

Course Description

This practical and highly-interactive course includes various practical sessions and exercises. Theory learnt will be applied using our state-of-the-art simulators.

The use of gas turbines in the process industries has increased considerably during the past few years. Gas turbines offer continuous combustion, low vibration, non-reciprocating motion and low weight to the horsepower ratio. Gas turbines have long been used in simple cycle mode for peak lopping in the power generation industry, where natural gas or distillate liquid fuels have been used, and where their ability to start and shut down on demand is essential.

The course is designed to introduce operations and maintenance personnel to the routine preventative maintenance procedures of the gas turbine generator support systems, and to the major mechanical maintenance required to attain high levels of availability, and reliability from the gas turbine generator.

This course will also cover borescope procedures, troubleshooting, and a summary of the disassembly inspections required for major gas turbine generator mechanical maintenance. Operating and maintenance personnel should attend this course together to develop a working relationship regarding the maintenance requirements of the unit, and how unit operation may affect these requirements.

The course will include detailed descriptions of the turbine generator and support systems. This will include a functional description of the systems as well as the routine preventative maintenance requirements. The course will also detail the gas turbine combustion inspection process with an overview of the hot gas path, and compressor inspections, with an emphasis on component inspection criteria.

Course Objectives

Upon the successful completion of this course, each participant will be able to:-

- Troubleshoot, operate and maintain the gas turbine generator in a professional manner
- Apply the best preventative maintenance requirements of the gas turbine support systems
- Discuss the guiding principles of ASME PTC 22 gas turbine performance test and prepare for test, conduct test and apply test records and test validity
- Carryout instruments and methods of measurement covering pressure measurement, temperature measurement, gas fuel heat input and liquid fuel heat input
- Illustrate electrical generation measurement, mechanical power measurement, speed measurement, humidity measurement, heat losses and other measurements
- Apply computation of results from electrical power calculations, mechanical power output calculation and heat rate calculations
- Report results as well as test uncertainty that include unit output and thermal efficiency, comparative testing uncertainty and uncertainty of flow calculation from heat balance
- Review and improve the major gas turbine mechanical maintenance procedures
- Identify the construction, support & auxiliary systems as well as the mechanical maintenance of the gas turbine generator
- Recognize the borescope including its functional use
- Apply proper troubleshooting techniques on generator turbine system and explain its unit documentation

Exclusive Smart Training Kit - H-STK®

*Participants of this course will receive the exclusive “Haward Smart Training Kit” (H-STK®). The H-STK® consists of a comprehensive set of technical content which includes **electronic version** of the course materials conveniently saved in a **Tablet PC**.*

Who Should Attend

This course covers systematic techniques on the operation, applications, performance, maintenance and troubleshooting of gas turbine. Maintenance and operation engineers and other technical staff will gain an excellent knowledge from the practical aspects of this course. Experienced specialists, project engineers and supervisory personnel involved in management, selection, operation, troubleshooting and maintenance of gas turbines will definitely benefit from the operational aspects of the course. Throughout the course, participant will have ample opportunity to have gas turbine related questions answered by the instructor.

Course Certificate(s)

Internationally recognized certificates will be issued to all participants of the course who completed a minimum of 80% of the total tuition hours.

Certificate Accreditations

Certificates are accredited by the following international accreditation organizations:-

- 
The International Accreditors for Continuing Education and Training (IACET - USA)

Haward Technology is an Authorized Training Provider by the International Accreditors for Continuing Education and Training (IACET), 2201 Cooperative Way, Suite 600, Herndon, VA 20171, USA. In obtaining this authority, Haward Technology has demonstrated that it complies with the **ANSI/IACET 2018-1 Standard** which is widely recognized as the standard of good practice internationally. As a result of our Authorized Provider membership status, Haward Technology is authorized to offer IACET CEUs for its programs that qualify under the **ANSI/IACET 2018-1 Standard**.

Haward Technology's courses meet the professional certification and continuing education requirements for participants seeking **Continuing Education Units (CEUs)** in accordance with the rules & regulations of the International Accreditors for Continuing Education & Training (IACET). IACET is an international authority that evaluates programs according to strict, research-based criteria and guidelines. The CEU is an internationally accepted uniform unit of measurement in qualified courses of continuing education.

Haward Technology Middle East will award **3.0 CEUs** (Continuing Education Units) or **30 PDHs** (Professional Development Hours) for participants who completed the total tuition hours of this program. One CEU is equivalent to ten Professional Development Hours (PDHs) or ten contact hours of the participation in and completion of Haward Technology programs. A permanent record of a participant's involvement and awarding of CEU will be maintained by Haward Technology. Haward Technology will provide a copy of the participant's CEU and PDH Transcript of Records upon request.

- 
British Accreditation Council (BAC)

Haward Technology is accredited by the **British Accreditation Council** for **Independent Further and Higher Education** as an **International Centre**. BAC is the British accrediting body responsible for setting standards within independent further and higher education sector in the UK and overseas. As a BAC-accredited international centre, Haward Technology meets all of the international higher education criteria and standards set by BAC.

Course Instructor(s)

This course will be conducted by the following instructor(s). However, we have the right to change the course instructor(s) prior to the course date and inform participants accordingly:

Mr. Den Bazley, PE, BSc, is a **Senior Mechanical Engineer** with over **30 years** of industrial experience in **Oil, Gas, Refinery, Petrochemical, Power and Utilities** industries. His wide expertise includes **Pumps & Compressors Maintenance & Troubleshooting, Centrifugal Pump Design, Hydraulic Turbines, Axial Flow Compressor, Centrifugal Pump Installation & Operation, Centrifugal Pump Maintenance & Troubleshooting, Centrifugal & Positive Displacement Pump Technology, Pumps & Valves Operation, Bearings, Seals & Couplings, Compressors & Turbines Maintenance & Troubleshooting, Gas Turbine Design & Maintenance, Gas Turbine**

Troubleshooting, Pressure Vessel Design, Fabrication & Testing, Tank & Tank Farms, Heat Exchangers Operation & Maintenance, Boilers & Steam System Management, Re-tubing & Tube Expanding Technology, Propylene Compressor & Turbine, Valve Installation & Repair, Safety Relief Valve Sizing & Troubleshooting, Dry Gas Seal Operation, Mechanical Seal Installation & Maintenance, Industrial Equipment & Turbomachinery, Pumps, Compressors, Turbines & Motors, Boiler & Steam System Management, Tune-Up, Heat Recovery & Optimization, Bearing & Lubrication, Installation & Failure Analysis, Boiler Operation & Maintenance, Process Control Valves, Steam Turbine Operation, Bearing Mounting/Dismounting, Valve Types, Troubleshooting & Repair Procedure, Pressure Vessels & Heat Exchangers, Corrosion Inspection, PSV Maintenance & Testing, Pump Maintenance, Machinery Troubleshooting, Valves, Safety Relief Valves, Strainers & Steam Traps, Pipeline Rules of Thumb, Analytical Prevention of Mechanical Failure, Gear Boxes Troubleshooting & Repair, Piping & Pipeline Design & Inspection, Pigging & Integrity Assessment, Process Piping Design, Pipeline Operation & Maintenance, Welding & Fabrication, Brazing, Fitness-for-Service (FFS), Process Plant Equipment, Pressure Vessels, Piping & Storage Facilities, Layout of Piping Systems & Process Equipment, Pipe Work Design & Fabrication, Mechanical Integrity & Reliability, Mechanical Rotating Equipment & Turbomachinery, Motors & Variable Speed Drives, Mechanical Engineering Design, Process Plant Shutdown, Turnaround & Troubleshooting, Mechanical Alignment, Laser & Dial-Indicator Techniques, Material Cataloguing, Condition Based Monitoring, Maintenance Management, Reliability Management, Reliability Centred Maintenance (RCM), Total Plant Maintenance (TPM) and Reliability-Availability-Maintainability (RAM), Engineering Drawings, Codes & Standards, P&ID Reading, Interpretation & Developing, Maintenance & Reliability Best Practices, Maintenance Auditing, Benchmarking & Performance Improvement, Excellence in Maintenance & Reliability Management, Preventive & Predictive Maintenance & Machinery Failure Analysis (RCFA), Total Plant Reliability Centered Maintenance (RCM), Rotating Equipment Reliability Optimization, Machinery Failure Analysis, Prevention & Troubleshooting, Maintenance Planning, Scheduling & Work Control and Maintenance Planning & Cost Estimation.

During his career life, Mr. Bazley has gained his practical and field experience through his various significant positions and dedication as the **General Manager, Branch Manager, Refinery Chairman, Engineering Manager, Maintenance Engineer, Construction Engineer, Project Engineer, Mechanical Engineer, Associate Engineer, Oil Process Engineer, Mechanical Services Superintendent, Quality Coordinator, Planning Coordinator, Consultant/Instructor, Lecturer/Trainer** and **Public Relations Officer** for numerous international companies like **ESSO, FFS Refinery, Dorbyl Heavy Engineering (VECOR), Vandenbergh Foods (Unilever), Engen Petroleum, Royle Trust and Pepsi-Cola.**

Mr. Bazley is a **Registered Professional Engineer** and has a **Bachelor's degree in Mechanical Engineering**. Further, he is a **Certified Engineer** (Government Certificate of Competency GCC Mechanical Pretoria), a **Certified Instructor/Trainer**, a **Certified Internal Verifier/Assessor/Trainer** by the **Institute of Leadership and Management (ILM)**, an active member of the **Institute of Mechanical Engineers (IMechE)** and has delivered numerous trainings, courses, seminars and workshops internationally.

Training Methodology

All our Courses are including **Hands-on Practical Sessions** using equipment, State-of-the-Art Simulators, Drawings, Case Studies, Videos and Exercises. The courses include the following training methodologies as a percentage of the total tuition hours:-

- 30% Lectures
- 20% Practical Workshops & Work Presentations
- 30% Hands-on Practical Exercises & Case Studies
- 20% Simulators (Hardware & Software) & Videos

In an unlikely event, the course instructor may modify the above training methodology before or during the course for technical reasons.

Course Fee

US\$ 6,000 per Delegate. This rate includes H-STK® (Haward Smart Training Kit), buffet lunch, coffee/tea on arrival, morning & afternoon of each day.

Accommodation

Accommodation is not included in the course fees. However, any accommodation required can be arranged at the time of booking.

Course Program

The following program is planned for this course. However, the course instructor(s) may modify this program before or during the course for technical reasons with no prior notice to participants. Nevertheless, the course objectives will always be met:

Day 1

0730 – 0800	<i>Registration & Coffee</i>
0800 – 0815	<i>Welcome & Introduction</i>
0815 – 0830	PRE-TEST
0830 – 0930	Gas Turbine Overview <i>Gas Turbine Basics • Gas Turbine Construction • Gas Turbine Device Summary • Gas Turbine Instrumentation (function and maintenance) • Gas Turbine-Generator Arrangement • Operating and Maintenance Factor Considerations • Standard Practices • Clearance Diagrams • Weights and Center of Gravity Diagram</i>
0930 – 0945	<i>Break</i>
0945 – 1100	Gas Turbine Support Systems: Description, Maintenance & Troubleshooting <i>Turbine and Auxiliary System Preventive Maintenance Scheduling • Inlet, Exhaust, and Control Air • Inlet Cooling • Lube Oil</i>
1100 – 1215	Gas Turbine Support Systems: Description, Maintenance & Troubleshooting (cont'd) <i>Hydraulic and Control Oil • Lift Oil • Trip Oil • Cooling Water</i>
1215 – 1230	<i>Break</i>
1230 – 1420	Gas Turbine Support Systems: Description, Maintenance & Troubleshooting (cont'd) <i>Cooling and Sealing Water • Fuel Systems(s) – Gas & Liquid • Atomizing Air • Purge Air</i>
1420 – 1430	Recap
1430	<i>Lunch & End of Day One</i>

Day 2

0730 – 0930	Gas Turbine Support Systems: Description, Maintenance & Troubleshooting (cont'd) Water Injection • Heating and Ventilation • Fire Protection • Hazardous Gas
0930 – 0945	Break
0945 – 1100	Gas Turbine Support Systems: Description, Maintenance & Troubleshooting (cont'd) Inlet Bleed Heat • Inlet Guide Vanes • Starting Means
1100 – 1215	Gas Turbine Support Systems: Description, Maintenance & Troubleshooting (cont'd) Water Wash • Power Augmentation (Steam) • Performance Monitoring
1215 – 1230	Break
1230 – 1420	ASME PTC 22 Gas Turbine Performance Test: Guiding Principles Preparations for Test • Conduct of Test • Test Records • Test Validity • Uncertainty
1420 – 1430	Recap
1430	Lunch & End of Day Two

Day 3

0730 – 0930	ASME PTC 22 Gas Turbine Performance Test: Instruments & Methods of Measurement General Requirements • Pressure Measurement • Temperature Measurement • Gas Fuel Heat Input • Liquid Fuel Heat Input
0930 – 0945	Break
0945 – 1100	ASME PTC 22 Gas Turbine Performance Test: Instruments & Methods of Measurement (cont'd) Electrical Generation Measurement • Mechanical Power Measurement • Speed Measurement • Humidity Measurement • Heat Losses • Other Measurements
1100 – 1215	ASME PTC 22 Gas Turbine Performance Test: Computation of Results Electrical Power Calculations • Mechanical Power Output Calculation • Heat Rate Calculations • Correction of Test Results – Fundamental Performance Equations • Application of Correction Factors • Degradation
1215 – 1230	Break
1230 – 1420	ASME PTC 22 Gas Turbine Performance Test: Report of Results General Requirements • Summary • Test Description • Test Equipment • Calculations & Results
1420 – 1430	Recap
1430	Lunch & End of Day Three

Day 4

0730 – 0930	ASME PTC 22 Gas Turbine Performance Test: Test Uncertainty Understanding Test Uncertainty • Unit Output & Thermal Efficiency • Comparative Testing Uncertainty • Uncertainty of Flow Calculation from Heat Balance
0930 – 0945	Break
0945 – 1100	Major Gas Turbine Mechanical Maintenance Combustion Inspection • Hot Gas Path Inspection • Major Inspection • Borescope Inspection • Gears – Accessory and/or Load

1100 – 1215	Generator Overview Machine Theory (Generator Basics) • Generator Construction • Generator Arrangement and Load Gear (if applicable) • Weights and Center of Gravity Diagrams
1215 – 1230	Break
1230 – 1420	Generator Support Systems Seal Oil • Hydrogen Gas • Lube Oil • Cooling Air Inlet • Lift/Jacking Oil • Collector Brush Rigging/Brushless Exciter • Coolers • High Voltage Bushings • Condition Monitor
1420 – 1430	Recap
1430	Lunch & End of Day Four

Day 5

0730 – 0930	Generator Mechanical Maintenance Rotor Removal • Turbine Generator Alignment • Load Gear
0930 – 0945	Break
0945 – 1100	Borescope Basics Required Equipment • Functional Use
1100 – 1215	Unit Documentation Operation and Maintenance Manuals • Reference Drawing Manuals • TILs
1215 – 1230	Break
1230 – 1345	Maintenance Documentation
1345 – 1400	Course Conclusion
1400 – 1415	POST-TEST
1415 – 1430	Presentation of Course Certificates
1430	Lunch & End of Course

Simulator (Hands-on Practical Sessions)

Practical session will be organized during the course for delegates to practice the theory learnt. Delegates will be provided with an opportunity to carryout various exercises using the “Single Shaft Gas Turbine Simulator” and “Two Shaft Gas Turbine Simulator”.

Single Shaft Gas Turbine Simulator

Two Shaft Gas Turbine Simulator
