

COURSE OVERVIEW HE0928 NFPA 13

Course Title NFPA 13

Course Date/Venue

September 21-25, 2025/Boardroom 1, Elite Byblos Hotel Al Barsha, Sheikh Zayed Road, Dubai, UAE

> O CEUS 30 PDHs)

Course Reference HE0928

<u>Course Duration/Credits</u> Five days/3.0 CEUs/30 PDHs

Course Description

This practical and highly-interactive course includes practical sessions and demonstration where participants carryout firefighting. Theory learnt in the class will be applied using a fire extinguisher through hands-on practical sessions.

This course is designed to provide participants with a detailed and up-to-date overview of NFPA 13. It covers the purpose and scope of NFPA 13 including the types of sprinkler systems, sprinkler system components and functionality; the fundamental design criteria for sprinkler systems, water supply requirements for sprinkler systems and fire sprinkler system standards and codes compliance; the occupancy and hazard classification, sprinkler system design approaches and sprinkler head selection and spacing; and the hydraulic calculation principles, pipe sizing and layout considerations and system modifications and retrofit requirements.

Further, the course will also discuss the storage sprinkler systems and protection requirements; the high-piled storage and ESFR systems, standpipe systems and fire department connections; the NFPA 13 seismic design requirements, types of seismic bracing and restraint methods; the pipe hanger spacing, seismic loads, expansion loops and flexible couplings; the combination of sprinklers with foam systems (NFPA 16); and the water mist systems (NFPA 750), sprinkler integration with fire alarm systems (NFPA 72) and sprinklers in industrial and special hazards.

HE0928- Page 1 of 9

During this interactive course, participants will learn the pipe installation techniques and sprinkler head installation requirements; the valves, gauges and riser installation and drainage and fire pump considerations; the hydrostatic testing and acceptance procedures and flow and pressure testing requirements; the functional testing of alarms and controls and final inspection and compliance reports; the periodic inspection, testing, and maintenance (ITM), impairment procedures and fire watch requirements; the common installation errors and code violations; and the fire code compliance and insurance requirements covering AHJ (Authority Having Jurisdiction) requirements, FM global and insurance-driven standards, legal liabilities for noncompliance and best practices for maintaining code compliance.

Course Objectives

Upon the successful completion of this course, each participant will be able to:-

- Apply and gain an in-depth knowledge on pre inspection, testing and maintenance of water-based fire protection systems in accordance with NFPS 13 standards
- Discuss the purpose and scope of NFPA 13 including the types of sprinkler systems, sprinkler system components and functionality
- Explain the fundamental design criteria for sprinkler systems, water supply requirements for sprinkler systems and fire sprinkler system standards and codes compliance
- Apply occupancy and hazard classification, sprinkler system design approaches and sprinkler head selection and spacing
- Recognize hydraulic calculation principles, pipe sizing and layout considerations and system modifications and retrofit requirements
- Discuss storage sprinkler systems and protection requirements, high-piled storage and ESFR systems and standpipe systems and fire department connections
- Identify NFPA 13 seismic design requirements, types of seismic bracing and restraint methods, pipe hanger spacing and seismic loads and expansion loops and flexible couplings
- Discuss combination of sprinklers with foam systems (NFPA 16), water mist systems (NFPA 750), sprinkler integration with fire alarm systems (NFPA 72), sprinklers in industrial and special hazards
- Apply pipe installation techniques, sprinkler head installation requirements, valves, gauges, and riser installation and drainage and fire pump considerations
- Carryout hydrostatic testing and acceptance procedures, flow and pressure testing requirements, functional testing of alarms and controls and final inspection and compliance reports
- Employ periodic inspection, testing, and maintenance (ITM), impairment procedures and fire watch requirements, common installation errors and code violations
- Review fire code compliance and insurance requirements covering AHJ (Authority Having Jurisdiction) requirements, FM global and insurance-driven standards, legal liabilities for non-compliance and best practices for maintaining code compliance

Exclusive Smart Training Kit - H-STK®

Participants of this course will receive the exclusive "Haward Smart Training Kit" (H-STK[®]). The H-STK[®] consists of a comprehensive set of technical content which includes electronic version of the course materials conveniently saved in a Tablet PC.

Who Should Attend

This course provides an overview of all significant aspects and considerations on the pre inspection, testing and maintenance of water-based fire protection systems in accordance with NFPS 13 standards for fire protection engineers, mechanical and civil engineers, fire inspectors and code officials, contractors and installers, building owners and facility managers, insurance and risk assessment professionals, firefighters and emergency responders and those who involved in fire protection system design, installation, inspection, and compliance.

Training Methodology

All our Courses are including Hands-on Practical Sessions using equipment, Stateof-the-Art Simulators, Drawings, Case Studies, Videos and Exercises. The courses include the following training methodologies as a percentage of the total tuition hours:-

30% Lectures20% Practical Workshops & Work Presentations30% Hands-on Practical Exercises & Case Studies20% Simulators (Hardware & Software) & Videos

In an unlikely event, the course instructor may modify the above training methodology before or during the course for technical reasons.

Accommodation

Accommodation is not included in the course fees. However, any accommodation required can be arranged at the time of booking.

Course Fee

US\$ 5,500 per Delegate + **VAT**. This rate includes H-STK[®] (Haward Smart Training Kit), buffet lunch, coffee/tea on arrival, morning & afternoon of each day.

HE0928- Page 3 of 9

Course Certificate(s)

Internationally recognized certificates will be issued to all participants of the course who completed a minimum of 80% of the total tuition hours

Certificate Accreditations

Certificates are accredited by the following international accreditation organizations: -

• BAC

British Accreditation Council (BAC)

Haward Technology is accredited by the **British Accreditation Council** for **Independent Further and Higher Education** as an **International Centre**. BAC is the British accrediting body responsible for setting standards within independent further and higher education sector in the UK and overseas. As a BAC-accredited international centre, Haward Technology meets all of the international higher education set by BAC.

• ACCREDITED PROVIDER <u>(IACE</u>

<u>The International Accreditors for Continuing Education and Training</u> (IACET - USA)

Haward Technology is an Authorized Training Provider by the International Accreditors for Continuing Education and Training (IACET), 2201 Cooperative Way, Suite 600, Herndon, VA 20171, USA. In obtaining this authority, Haward Technology has demonstrated that it complies with the **ANSI/IACET 2018-1 Standard** which is widely recognized as the standard of good practice internationally. As a result of our Authorized Provider membership status, Haward Technology is authorized to offer IACET CEUs for its programs that qualify under the **ANSI/IACET 2018-1 Standard**.

Haward Technology's courses meet the professional certification and continuing education requirements for participants seeking **Continuing Education Units** (CEUs) in accordance with the rules & regulations of the International Accreditors for Continuing Education & Training (IACET). IACET is an international authority that evaluates programs according to strict, research-based criteria and guidelines. The CEU is an internationally accepted uniform unit of measurement in qualified courses of continuing education.

Haward Technology Middle East will award **3.0 CEUs** (Continuing Education Units) or **30 PDHs** (Professional Development Hours) for participants who completed the total tuition hours of this program. One CEU is equivalent to ten Professional Development Hours (PDHs) or ten contact hours of the participation in and completion of Haward Technology programs. A permanent record of a participant's involvement and awarding of CEU will be maintained by Haward Technology. Haward Technology will provide a copy of the participant's CEU and PDH Transcript of Records upon request.

HE0928- Page 4 of 9

Course Instructor(s)

This course will be conducted by the following instructor(s). However, we have the right to change the course instructor(s) prior to the course date and inform participants accordingly:

Mr. Roedolf Coetzer is a Senior HSE Consultant with over 30 years of extensive practical experience within the Oil & Gas, Refinery, Power, Petroleum and Petrochemical industries. His expertise includes Safety Auditing, Hazard Identification & Site Inspection, Safety Inspector Qualification, Certified Safety Manager (CSMP), Industrial Safety, Construction Safety, HSE Management, Risk Management, Risk Assessment & Mitigation, Job Hazard Analysis (JSA), Hazard Analysis & Control, Hazard Recognition, Hazard Identification, Root Cause Analysis

& Problem Solving, Accident & Incident Investigation, First Aid, CPR, AED (BFA) Basic Life Support (BLS), Basic Ambulance, Emergency Care, Self-Contained Breathing Apparatus (SCBA), Personal Protective Equipment (PPE), Incident Command, Incident Report & Investigation, Accident/Incident Investigation, Root Cause Analysis & Reporting, Emergency Response, Emergency Control Centre Operations, Oil Spill Response, Emergency Management, Confined Space Safety, Fall Protection, Gas Leaks & Gas Detectors Testing, Workplace Violence Prevention, HAZID, HAZMAT, HAZOP, HAZWOPER, Process Hazard Analysis (PHA), Process Safety Management (PSM), Safety Audit, Fleet Safety Management, Lockout & Tag-out (LOTO Ergonomics, Project Management, Human Resource Development, Tactics & Strategies in Hostile Environments, Organizational Change, Quality Assurance, Safety Supervision & Leadership and Industrial Hygiene. Further, he is well-versed in Fire Extinguishers, Firefighting, Triangle of Fire, Portable Fire Extinguisher, Fire Rescue, Fire Protection, Fire Prevention, Fire Investigation, Fire Behaviour, Fire Suppression Systems, Fire Safety, Fire Engineering Management, Fire Risk Assessment, Fire Awareness, Fire Detection & Alarm Systems, Hose Reels & Sprinkler Systems, Fire & Rescue Planning & Operation, Fire Equipment & Facilities Inspection, Fire Trucks Driving & Operation, Fire Aviation, Wild Land Firefighting/ICS and Fire & Emergency Services Start-up & Mobilization. He is also specialized on NFPA Codes & Standards, OSHA Standards, ISO 9001, ISO 14001, OHSAS 18001 and Lean Six Sigma. He is currently the General Manager of AGEC and ranked as a Distinguished Toastmaster (DTM).

During his career life, Mr. Coetzer has gained his practical and field experience through his various significant positions and dedications as the Fire Chief, Fire Engineer, HSE & Security Manager, Environmental Manager, Project Manager, Acting HSE Manager, Senior Fireman, Fireman, Fire Marshall, Assistant Chief Fire Officer (ACFO), Spill Response Team Leader, Senior Fire & Emergency Response Technical Advisor, Subject Matter Expert, Training Development Specialist, Learning & Development Officer, Senior Officer, Facility Management Senior Health & Safety Supervisor, Fire & Rescue Services Team Member, Junior Fireman, Operational Medical Orderly (Ops Medic) and a Fire Safety, Prevention & Safety Technology Technician from various companies such as the Southern African Emergency Services Institute, South African Fire Services, Al-Muhaidib Contracting Company, ACWA Power Health & Safety, HIWPT, Rabigh Arabian Water & Electricity Company (RAWEC), King Abdulaziz International Airport, SRT, Sizwe Consultants, Highveld Steel and Vanadium, Kriel City Council, Germiston City Council and South African Defence Force.

Mr. Coetzer is a Certified IFSAC Firefighter I&II (<u>NFPA</u> 1001), a Certified First Responder Awareness Level (<u>NFPA</u> 472) and holds a Certificate in Electrical & Electronics NQF Level 4, Leadership Excellence (LDREXC), High-Level Executive Coaching in High-Performance Mentorship, and Leader Strategic Management SUAS. Further, he is a Neuroscience Mental Focus Specialist Advisor, a Professional Practitioner in Psychology Counselling, ISO 9001, ISO 14001 Auditor, Certified Lean Six Sigma Yellow Belt & White Belt, a Certified IADC Rig Pass Safety Orientation Instructor, a Certified Internal Verifier/Assessor/Trainer by the Institute of Leadership & Management (ILM) and a Certified Instructor/Trainer. Moreover, he is a Registered Basic Ambulance Assistant by the South African medical and Dental Council, a recognized member of The International Fire Service Accreditation Congress (IFSAC), the National Fire Protection Association (NFPA), the International Association of Drilling Contractors (IADC) and South African Fire Institute. He has further delivered innumerable courses, trainings, workshops and conferences globally.

HE0928- Page 5 of 9

Course Program

The following program is planned for this course. However, the course instructor(s) may modify this program before or during the workshop for technical reasons with no prior notice to participants. Nevertheless, the course objectives will always be met:

Day 1:	Sunday, 21 st of September 2025
0730 - 0800	Registration & Coffee
0800 - 0815	Welcome & Introduction
0815 - 0830	PRE-TEST
0830 - 0930	Overview of NFPA 13 & Fire Protection Systems Purpose and Scope of NFPA 13 • History and Evolution of NFPA 13 • Relationship with Other NFPA Codes (NFPA 25, NFPA 72, NFPA 20) • Regulatory and Compliance Considerations
0930 - 0945	Break
0945 - 1030	Types of Sprinkler SystemsWet Pipe Sprinkler Systems • Dry Pipe Sprinkler Systems • Preaction andDeluge Systems • Special Hazard Systems
1030 - 1130	<i>Sprinkler System Components & Functionality</i> <i>Sprinkler Heads (Types, Response Time, K-Factors) • Piping and Fittings (Materials, Sizing, Layout) • Water Supply Sources (Municipal, Private, Storage Tanks) • Control Valves, Alarms, and Detection Devices</i>
1130 - 1215	Fundamental Design Criteria for Sprinkler SystemsOccupancy Classification and Hazard Levels • Density/Area Approach versusRoom Design Method • Hydraulic Demand versus Water Supply Capacity •Performance-Based Design Considerations
1215 - 1230	Break
1230 - 1330	Water Supply Requirements for Sprinkler SystemsMinimum Flow and Pressure Requirements • Fire Pump Requirements (NFPA20 Reference) • Water Storage Tank Sizing (NFPA 22 Reference) • WaterDemand Calculation and Testing
1330 - 1420	<i>Fire Sprinkler System Standards & Codes Compliance</i> NFPA 13 Editions and Key Updates • Local and International Fire Codes (IBC, IFC) • OSHA and Insurance Industry Guidelines • Design Certification and Compliance Reporting
1420 - 1430	Recap Using this Course Overview, the Instructor(s) will Brief Participants about the Topics that were Discussed Today and Advise Them of the Topics to be Discussed Tomorrow
1430	Lunch & End of Day One

Day 2:	Monday, 22 nd of September 2025
0730 - 0830	Occupancy & Hazard Classification
	Light Hazard Occupancies • Ordinary Hazard Occupancies (Group 1 & 2) •
	Extra Hazard Occupancies (Group 1 & 2) • Storage and Special Occupancy
	Classifications
0830 - 0930	Sprinkler System Design Approaches
	Area/Density Curves and Design Area Limitations • Calculation of Minimum
	Water Supply Requirements • High-Piled Storage Considerations • Special
	Design Considerations for Cold Environments
0930 - 0945	Break

HE0928- Page 6 of 9

0945 - 1100	Sprinkler Head Selection & Spacing
	Types of Sprinklers (Pendent, Upright, Sidewall, ESFR) • Coverage and
	Placement per NFPA 13 • Obstruction Rules and Clearance Requirements •
	Ceiling Heights and Deflector Positioning
	Hydraulic Calculation Principles
1100 – 1215	Flow and Pressure Calculations • Friction Loss Calculations (Hazen-Williams
1100 - 1215	Formula) • Hydraulic Calculation Methods (Tree, Loop, Grid) • Computerized
	Hydraulic Modeling
1215 – 1230	Break
	Pipe Sizing & Layout Considerations
1230 - 1330	Pipe Schedule versus Hydraulically Designed Systems • Pipe Material
1250 - 1550	Selection (Steel, CPVC, Copper) • Fittings and Joints (Grooved, Threaded,
	Welded) • Underground Piping Considerations
	System Modifications & Retrofit Requirements
1330 – 1420	<i>Upgrading Existing Systems to Meet NFPA 13 Standards</i> • Code Compliance
1550 - 1420	for System Renovations • Assessing Water Supply Impact on Modifications •
	Seismic Protection Considerations
1420 - 1430	Recap
	Using this Course Overview, the Instructor(s) will Brief Participants about the
	Topics that were Discussed Today and Advise Them of the Topics to be
	Discussed Tomorrow
1430	Lunch & End of Day Two

Day 3:	Tuesday, 23 rd of September 2025
0730 - 0830	Storage Sprinkler Systems & Protection Requirements
	Classifications of Storage (Encapsulated, Exposed, Palletized) • NFPA 13
	Requirements for Rack Storage Protection • Ceiling-Only versus In-Rack
	Sprinkler Systems • Protection of Group A Plastics and Flammable Liquids
	High-Piled Storage & ESFR Systems
0830 - 0930	ESFR (Early Suppression, Fast Response) Sprinkler Design • K-Factor
0000 - 0000	Considerations for Storage Applications • Water Supply Requirements for
	ESFR Systems • Limitations and Trade-Offs of ESFR Systems
0930 - 0945	Break
	Standpipe Systems & Fire Department Connections
0945 – 1100	NFPA 14 Integration with NFPA 13 • Standpipe Classifications (Class I, II,
0545 - 1100	III) • Hose Connections and Pressure Requirements • Fire Department
	Connection (FDC) Design Considerations
	Seismic Protection & System Bracing
1100 – 1215	NFPA 13 Seismic Design Requirements • Types of Seismic Bracing and
1100 - 1213	Restraint Methods • Pipe Hanger Spacing and Seismic Loads • Expansion
	Loops and Flexible Couplings
1215 - 1230	Break
1230 - 1330	Special Fire Suppression Systems Integration
	Combination of Sprinklers with Foam Systems (NFPA 16) • Water Mist
	Systems (NFPA 750) • Sprinkler Integration with Fire Alarm Systems (NFPA
	72) • Sprinklers in Industrial and Special Hazards

HE0928- Page 7 of 9

1330 – 1420	Corrosion & System Maintenance Challenges
	Corrosion Control in Sprinkler Systems • Microbiologically Influenced
	<i>Corrosion (MIC)</i> • <i>Testing and Inspection for Corrosion Prevention</i> • <i>Internal</i>
	Pipe Coatings and Corrosion-Resistant Materials
1420 - 1430	Recap
	Using this Course Overview, the Instructor(s) will Brief Participants about the
	Topics that were Discussed Today and Advise Them of the Topics to be
	Discussed Tomorrow
1430	Lunch & End of Day Three

Day 4:	Wednesday, 24 th of September 2025
	NFPA 13 Installation Standards
0730 - 0830	Pipe Installation Techniques • Sprinkler Head Installation Requirements •
	Valves, Gauges, and Riser Installation • Drainage and Fire Pump
	Considerations
	System Commissioning & Acceptance Testing
0830 - 0930	Hydrostatic Testing and Acceptance Procedures • Flow and Pressure Testing
0050 - 0550	Requirements • Functional Testing of Alarms and Controls • Final Inspection
	and Compliance Reports
0930 - 0945	Break
	Periodic Inspection, Testing & Maintenance (ITM)
0945 – 1100	NFPA 25 Overview for Sprinkler System Maintenance • Quarterly and
0010 1100	Annual Inspection Requirements • Common ITM Deficiencies and Remedies •
	Documentation and Recordkeeping Requirements
	Impairment Procedures & Fire Watch Requirements
1100 – 1215	Planned versus Unplanned Impairments • Fire Watch Protocols and
	Responsibilities • System Restoration Procedures • Coordination with Fire
	Departments and AHJs
1215 - 1230	Break
	Common Installation Errors & Code Violations
1230 – 1330	Improper Sprinkler Spacing • Obstruction Violations • Undersized Water
	Supplies • Improper Pipe Support and Seismic Bracing
	Fire Code Compliance & Insurance Requirements
1330 – 1420	AHJ (Authority Having Jurisdiction) Requirements • FM Global and
	Insurance-Driven Standards • Legal Liabilities for Non-Compliance • Best
	Practices for Maintaining Code Compliance
1420 - 1430	Recap
	Using this Course Overview, the Instructor(s) will Brief Participants about the
	Topics that were Discussed Today and Advise Them of the Topics to be
1420	Discussed Tomorrow
1430	Lunch & End of Day Four

Day 5:	Thursday, 25 th of September 2025
0730 – 0830	NFPA 13 Updates & Emerging Trends
0830 - 0930	Case Studies of Fire Incidents & Lessons Learned
0930 - 0945	Break
0945 – 1215	Fire Risk Assessment & Performance-Based Design

HE0928- Page 8 of 9

1215 – 1230	Break
1230 - 1330	Design Workshop & Hands-On Exercises
1330 - 1345	<i>Course Conclusion</i> Using this Course Overview, the Instructor(s) will Brief Participants about a Topics that were Covered During the Course
1345 - 1415	POST-TEST
1415 – 1430	Presentation of Course Certificates
1430	Lunch & End of Course

Simulators (Hands-on Practical Sessions)

Practical sessions will be organized during the course for delegates to practice the theory learnt. Delegates will be provided with an opportunity to carryout various exercises using fire extinguishers.
