

COURSE OVERVIEW ME0390
Heavy Duty Gas Turbine Major Inspections

Course Title

Heavy Duty Gas Turbine Major Inspections

Course Date/Venue

September 22-26, 2024/The Beluga Meeting Room, The H Dubai Hotel, Sheikh Zayed Road, Dubai, UAE

Course Reference

ME0390

Course Duration/Credits

Five days/3.0 CEUs/30 PDHs

Course Description

This practical and highly-interactive course includes various practical sessions and exercises. Theory learnt will be applied using our state-of-the-art simulators.

This This course is designed to provide participants with a detailed and up-to-date overview of Heavy Duty Gas Turbine Major Inspections. It covers the fundamentals, components, operation principles and types of gas turbine; the purpose, frequency and scope of major inspections; the safety standards, personal protective equipment (PPE) and procedures for site preparation; the specialized tools and equipment used during major inspections; the documentation process including inspection checklists, compliance with standards and reporting; the step-by-step guide on the disassembly process for major inspections; and the combustion section inspection, turbine section inspection, compressor section inspection and bearing and seal inspection.

During this interactive course, participants will learn the interactive course, participants will learn the NDT methods used in turbine inspections and the specific application of NDT techniques for detecting flaws in turbine components; the techniques for analyzing turbine vibrations to identify issues; the rotor dynamics and the importance of rotor balancing during inspections; the thermal imaging and best practices for the reassembly of turbine components after inspection; the proper alignment and calibration of turbine components; the effective procedures for conducting performance tests; inspecting and testing turbine control systems for operational integrity; and commissioning the turbine post-inspection in as safely manner.

Course Objectives

Upon the successful completion of this course, each participant will be able to:-

- Apply and gain a comprehensive knowledge on heavy duty gas turbine major inspections.
- Discuss fundamentals, components, operation principles and types of gas turbine
- Identify the purpose, frequency and scope of major inspections
- Apply the safety standards, personal protective equipment (PPE) and procedures for site preparation
- Recognize the specialized tools and equipment used during major inspections
- Illustrate the documentation process including inspection checklists, compliance with standards and reporting
- Carryout step-by-step guide on the disassembly process for major inspections as well as combustion section inspection, turbine section inspection, compressor section inspection and bearing and seal inspection
- Employ NDT methods used in turbine inspections covering ultrasonic, radiographic, magnetic particle, etc.
- Implement specific application of NDT techniques for detecting flaws in turbine components as well as techniques for analyzing turbine vibrations to identify issues
- Identify rotor dynamics and the importance of rotor balancing during inspections
- Use thermal imaging to identify hot spots and insulation failures
- Employ best practices for the reassembly of turbine components after inspection as well as the techniques for ensuring proper alignment and calibration of turbine components
- Apply effective procedures for conducting performance tests to verify turbine functionality
- Inspect and test turbine control systems for operational integrity and carryout steps for safely commissioning the turbine post-inspection

Exclusive Smart Training Kit - H-STK®

Participants of this course will receive the exclusive “Haward Smart Training Kit” (**H-STK®**). The **H-STK®** consists of a comprehensive set of technical content which includes **electronic version** of the course materials, sample video clips of the instructor’s actual lectures & practical sessions during the course conveniently saved in a **Tablet PC**.

Who Should Attend

This course provides an overview of all significant aspects and considerations of heavy duty gas turbine major inspections for inspection engineers, inspectors, supervisors and managers, operations managers, asset managers, maintenance engineers, reliability engineers, gas turbine technicians, maintenance planners/schedulers: personnel, safety and compliance personnel, engineers and technicians from gas turbine OEMS, quality assurance/quality control personnel.

Course Certificate(s)

Internationally recognized certificates will be issued to all participants of the course who completed a minimum of 80% of the total tuition hours.

Certificate Accreditations

Certificates are accredited by the following international accreditation organizations:-

- 
The International Accreditors for Continuing Education and Training (IACET - USA)

Haward Technology is an Authorized Training Provider by the International Accreditors for Continuing Education and Training (IACET), 2201 Cooperative Way, Suite 600, Herndon, VA 20171, USA. In obtaining this authority, Haward Technology has demonstrated that it complies with the **ANSI/IACET 2018-1 Standard** which is widely recognized as the standard of good practice internationally. As a result of our Authorized Provider membership status, Haward Technology is authorized to offer IACET CEUs for its programs that qualify under the **ANSI/IACET 2018-1 Standard**.

Haward Technology's courses meet the professional certification and continuing education requirements for participants seeking **Continuing Education Units (CEUs)** in accordance with the rules & regulations of the International Accreditors for Continuing Education & Training (IACET). IACET is an international authority that evaluates programs according to strict, research-based criteria and guidelines. The CEU is an internationally accepted uniform unit of measurement in qualified courses of continuing education.

Haward Technology Middle East will award **3.0 CEUs** (Continuing Education Units) or **30 PDHs** (Professional Development Hours) for participants who completed the total tuition hours of this program. One CEU is equivalent to ten Professional Development Hours (PDHs) or ten contact hours of the participation in and completion of Haward Technology programs. A permanent record of a participant's involvement and awarding of CEU will be maintained by Haward Technology. Haward Technology will provide a copy of the participant's CEU and PDH Transcript of Records upon request.

- 
British Accreditation Council (BAC)

Haward Technology is accredited by the **British Accreditation Council** for **Independent Further and Higher Education** as an **International Centre**. BAC is the British accrediting body responsible for setting standards within independent further and higher education sector in the UK and overseas. As a BAC-accredited international centre, Haward Technology meets all of the international higher education criteria and standards set by BAC.

Accommodation

Accommodation is not included in the course fees. However, any accommodation required can be arranged at the time of booking.

Course Instructor(s)

This course will be conducted by the following instructor(s). However, we have the right to change the course instructor(s) prior to the course date and inform participants accordingly:

Mr. Waleed Mohamed is a **Senior Mechanical & Maintenance Engineer** with extensive years of experience in **Rotating Equipment** and **Machinery** including **Turbines, Pumps, Compressors, Motors, Turbo-expanders, Gears, Mixers, Air Coolers**, etc. within the **Oil & Gas** industries. His wide experience also covers **Gas Turbine** Operations, Maintenance, Inspection, Control & Troubleshooting, **Major Overhaul of Heavy Duty Gas Turbines, Gas Turbine Control System Upgrade, Gas Turbine** Characteristics & Performance Evaluation, **Gas Compressors, Centrifugal & Reciprocating Compressors, Air Compressors** (Oil Injection & Oil Free), Predictive Maintenance (PM) for **Pumps, Coolers, Air Compressors & Gas Compressors, Compressor Set** Operation & Routine Maintenance, **Bearing & Gear Technology, Gear Boxes, Air Coolers** (Forced & Induced Draft), **Pumps** (Motor, Diesel & Air Driven), **Crude Oil Pumps, Utility Pumps** (Diesel & Potable), **Fire Fighting Pumps** (Main Diesel with Jockey), **Firefighting Systems Testing** (Tanks Cooling Ring, Foam Bladder System, Automatic Deluge System, Transformers & Substation Sprinklers System), **Machinery Performance** (Flow Rate, Pressure & Efficiency), **Mechanical Shaft to Shaft Alignment**, Strategic Tank Farm, **Tank Mixers, Heat Engines**, Replacement of **ASV Valves & Repair Kit, Axial Compressor** (Wash Based), **Air Filters** Change, **Nozzle Cylinder Change, Spare Parts & Maintenance** and **Maintenance Operation** Management. Further he is well-versed in **Vibration Analysis (ISO/ASNT), Vibration Predictive Maintenance, Visual Inspection** Testing, **Penetration** Testing, **Magnetic** Testing, **Radiographic** Testing, **Ultrasound** Testing, **Painting** Techniques, **Installation of Single Girder Overhead Crane, Emergency Response & Crisis** Management, **Renewable Energy & Power** Efficiency, **Combustible Substances, Emergency Response & Crisis** Management, **Risk Assessment & Evaluation, Production Maintenance Safety, Project** Management, Time Management & Pressure Control and also knowledgeable in **Mark VI Control Panel, AutoCAD, SAP, Solid Works, Matlab, Pipesim** and **Mind Mapping** software.

During his career life, Mr. Waleed held various positions such as the **Mechanical Department Manager, Rotating Equipment Engineer, Mechanical Section Head, Excellent Engineer, First Engineer, Commissioning Machinery Engineer Commissioning & Start Up Engineer**, Lecturer and Instructor/Trainer for various international companies such as Petrobel, ENPPI/PETROJET, Petromaint, Siemens, RITEC, SOPC, SOLAR, OGS, JOUTN, INTEX, EMC and EL NASR Petroleum Company, just to name a few.

Mr. Waleed has a **Bachelor's** degree in **Mechanical and Power Engineering** and a **Higher Diploma in Natural Gas** and **Diploma in Gas Turbine & Pipeline**. Further, he is a **Certified Instructor/Trainer**, has further delivered numerous trainings, courses, workshops, seminars and conferences worldwide

Training Methodology

All our Courses are including **Hands-on Practical Sessions** using equipment, State-of-the-Art Simulators, Drawings, Case Studies, Videos and Exercises. The courses include the following training methodologies as a percentage of the total tuition hours:-

- 30% Lectures
- 20% Practical Workshops & Work Presentations
- 30% Hands-on Practical Exercises & Case Studies
- 20% Simulators (Hardware & Software) & Videos

In an unlikely event, the course instructor may modify the above training methodology before or during the course for technical reasons.

Course Fee

US\$ 5,500 per Delegate + **VAT**. This rate includes H-STK® (Haward Smart Training Kit), buffet lunch, coffee/tea on arrival, morning & afternoon of each day

Course Program

The following program is planned for this course. However, the course instructor(s) may modify this program before or during the course for technical reasons with no prior notice to participants. Nevertheless, the course objectives will always be met:

Day 1: Sunday, 22nd of September 2024

0730 - 0800	Registration & Coffee
0800 - 0815	Welcome & Introduction
0815 - 0830	PRE-TEST
0830 - 0900	Gas Turbine Fundamentals: Introduction to Gas Turbine Components, Operation Principles & Types
0900 - 0930	Overview of Major Inspections: Purpose, Frequency & Scope of Major Inspections
0930 - 0945	Break
0945 - 1100	Safety Procedures & Preparations: Safety Standards, Personal Protective Equipment (PPE) & Site Preparation
1100 - 1200	Tools & Equipment for Inspection: Overview of the Specialized Tools & Equipment Used During Major Inspections
1200 - 1215	Break
1215 - 1420	Documentation & Compliance: Understanding the Documentation Process, including Inspection Checklists, Compliance with Standards & Reporting
1420 - 1430	Recap
1430	Lunch & End of Day One

Day 2: Monday, 23rd of September 2024

0730 - 0830	Case Study: Review of a Recent Major Inspection, Highlighting Challenges & Learnings
0830 - 0930	Disassembly Procedures: Step-By-Step Guide on the Disassembly Process for Major Inspections
0930 - 0945	Break
0945 - 1100	Combustion Section Inspection: Detailed Inspection of Combustors, Fuel Nozzles & Combustion Liners
1100 - 1200	Turbine Section Inspection: Examination of Turbine Blades, Vanes & Rotor Assemblies
1200 - 1215	Break
1215 - 1420	Compressor Section Inspection: Inspection of Compressor Blades, Vanes & Casing
1420 - 1430	Recap
1430	Lunch & End of Day Two

Day 3: Tuesday, 24th of September 2024

0730 - 0830	Bearing & Seal Inspection: Methods for Inspecting Bearings, Seals & Related Components
0830 - 0930	Interactive Workshop: Hands-On Practice on Component Inspection & Identification of Common Issues
0930 - 0945	Break
0945 - 1100	NDT Techniques: Overview of NDT Methods Used in Turbine Inspections (e.g., Ultrasonic, Radiographic, Magnetic Particle)
1100 - 1200	Application of NDT in Turbine Inspection: Specific Applications of NDT Techniques for Detecting Flaws in Turbine Components
1200 - 1215	Break
1215 - 1420	Vibration Analysis: Techniques for Analyzing Turbine Vibrations to Identify Issues
1420 - 1430	Recap
1430	Lunch & End of Day Three

Day 4: Wednesday, 25th of September 2024

0730 - 0830	Rotor Dynamics & Balancing: Rotor Dynamics & the Importance of Rotor Balancing During Inspections
0830 - 1930	Thermal Imaging: Using Thermal Imaging to Identify Hot Spots & Insulation Failures
0930 - 0945	Break
0945 - 1100	Workshop on NDT Equipment: Practical Session on Using NDT Equipment on Turbine Components
1100 - 1200	Reassembly Procedures: Best Practices for the Reassembly of Turbine Components after Inspection
1200 - 1215	Break
1215 - 1420	Alignment & Calibration: Techniques for Ensuring Proper Alignment & Calibration of Turbine Components
1420 - 1430	Recap
1430	Lunch & End of Day Four

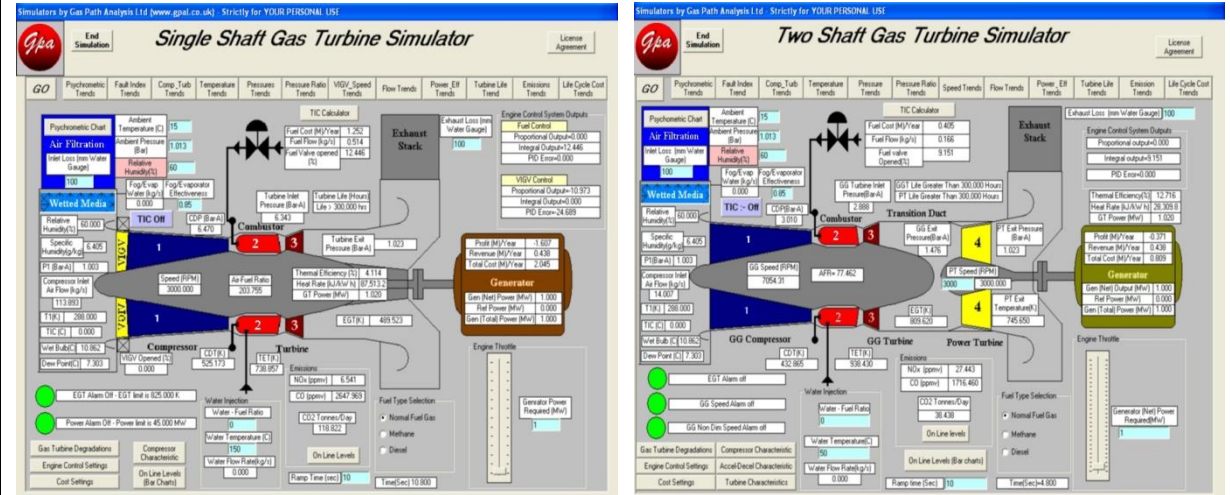

Day 5: Thursday, 26th of September 2024

0730 – 0830	Performance Testing: Procedures for Conducting Performance Tests to Verify Turbine Functionality
0830 - 0930	Control Systems Check: Inspection & Testing of Turbine Control Systems for Operational Integrity
0930 – 0945	Break
0945 – 1200	Commissioning Steps: Steps for Safely Commissioning the Turbine Post-Inspection
1200 – 1215	Break
1215 – 1345	Group Project: Teams Work on a Simulated Reassembly & Commissioning Exercise, Applying Learned Techniques
1345 – 1400	Course Conclusion
1400 – 1415	POST-TEST
1415 – 1430	Presentation of Course Certificates
1430	Lunch & End of Course

Simulator (Hands-on Practical Sessions)

Practical session will be organized during the course for delegates to practice the theory learnt. Delegates will be provided with an opportunity to carryout various exercises using the “Single Shaft Gas Turbine Simulator” and “Two Shaft Gas Turbine Simulator”.

The image displays two side-by-side screenshots of simulation software. The left screenshot is titled "Single Shaft Gas Turbine Simulator" and shows a detailed schematic of a gas turbine engine with various sensors and data points. The right screenshot is titled "Two Shaft Gas Turbine Simulator" and shows a similar schematic but with an additional power turbine section. Both interfaces include a top menu bar with options like "GO", "Psychrometric Charts", "Fault Index Trends", and "TIC Calculate". The main area contains a complex diagram of the engine components, including the compressor, combustor, and turbine, with numerous numerical readouts and control parameters.
