

## **COURSE OVERVIEW EE0145** **Electrical Heat Trace - Basics**

### **Course Title**

Electrical Heat Trace – Basics

### **Course Date/Venue**

July 20-24, 2025/Sharjah Meeting Room,  
The Tower Plaza Hotel, Dubai, UAE

### **Course Reference**

EE0145

### **Course Duration/Credits**

Five days/3.0 CEUs/30 PDHs

### **Course Description**

***This practical and highly-interactive course includes various practical sessions and exercises. Theory learnt will be applied using our state-of-the-art simulators.***

This course is designed to provide participants with a detailed and up-to-date overview of Electrical Heat Trace – Basics. It covers the purpose of heat tracing and its applications in petroleum industries; the types of electrical heat tracing systems, heat tracing standards and regulations; the heat tracing components and accessories; the basics of heat loss calculation, electrical load and power supply requirements; the cable selection and sizing, temperature control and monitoring; and the insulation and cladding requirements.

Further, the course will also discuss the importance of proper grounding in heat tracing systems and protection against short circuits and electrical faults; the hazardous zones classification (zone 0, 1, 2); the explosion-proof and intrinsically safe installations; the pre-installation planning, site preparation and proper installation of heat tracing cables; the splicing, termination and connection methods including controller and sensor installation; and the insulation and jacketing materials and proper sealing techniques for moisture protection.

During this interactive course, participants will learn the post-installation testing and commissioning, routine inspection and preventive maintenance; the common heat tracing failures and causes; the use of thermal imaging for hot spot detection; the emergency response, safety procedures and upgrading and retrofitting existing systems; configuring and calibrating controllers; the insulation and weatherproofing application; the safe electrical work procedures, handling emergency shutdowns and PPE selection and usage; and the safe troubleshooting practices.

### **Course Objectives**

Upon the successful completion of this course, each participant will be able to:-

- Apply and gain a fundamental knowledge on electrical heat trace
- Discuss the purpose of heat tracing and its applications in petroleum industries
- Identify the types of electrical heat tracing systems and review heat tracing standards and regulations
- Recognize heat tracing components and accessories including the basics of heat loss calculation
- Discuss electrical load and power supply requirements and apply cable selection and sizing
- Carryout temperature control and monitoring and identify insulation and cladding requirements
- Explain the importance of proper grounding in heat tracing systems and protection against short circuits and electrical faults
- Classify hazardous zones (zone 0, 1, 2) and apply explosion-proof and intrinsically safe installations
- Apply pre-installation planning, site preparation and proper installation of heat tracing cables
- Illustrate splicing, termination and connection methods including controller and sensor installation
- Apply insulation and jacketing materials and proper sealing techniques for moisture protection
- Employ post-installation testing and commissioning, routine inspection and preventive maintenance
- Identify the common heat tracing failures and causes and use thermal imaging for hot spot detection
- Implement emergency response, safety procedures and upgrading and retrofitting existing systems
- Configure and calibrate controllers and carryout insulation and weatherproofing application
- Demonstrate safe electrical work procedures, handle emergency shutdowns and apply PPE selection and usage including safe troubleshooting practices

### **Exclusive Smart Training Kit - H-STK®**

*Participants of this course will receive the exclusive “Haward Smart Training Kit” (H-STK®). The H-STK® consists of a comprehensive set of technical content which includes **electronic version** of the course materials conveniently saved in a **Tablet PC**.*

### **Who Should Attend**

This course provides a basic overview of all significant aspects and considerations of electrical heat trace – basics for electrical engineers, project managers, field technicians, facility managers, safety personnel, designers and other technical staff.

### **Course Certificate(s)**

Internationally recognized certificates will be issued to all participants of the course who completed a minimum of 80% of the total tuition hours.

### **Certificate Accreditations**

Haward's certificates are accredited by the following international accreditation organizations: -

-  British Accreditation Council (BAC)

Haward Technology is accredited by the **British Accreditation Council** for **Independent Further and Higher Education** as an **International Centre**. Haward's certificates are internationally recognized and accredited by the British Accreditation Council (BAC). BAC is the British accrediting body responsible for setting standards within independent further and higher education sector in the UK and overseas. As a BAC-accredited international centre, Haward Technology meets all of the international higher education criteria and standards set by BAC.

-  The International Accreditors for Continuing Education and Training (IACET - USA)

Haward Technology is an Authorized Training Provider by the International Accreditors for Continuing Education and Training (IACET), 2201 Cooperative Way, Suite 600, Herndon, VA 20171, USA. In obtaining this authority, Haward Technology has demonstrated that it complies with the **ANSI/IACET 2018-1 Standard** which is widely recognized as the standard of good practice internationally. As a result of our Authorized Provider membership status, Haward Technology is authorized to offer IACET CEUs for its programs that qualify under the **ANSI/IACET 2018-1 Standard**.

Haward Technology's courses meet the professional certification and continuing education requirements for participants seeking **Continuing Education Units (CEUs)** in accordance with the rules & regulations of the International Accreditors for Continuing Education & Training (IACET). IACET is an international authority that evaluates programs according to strict, research-based criteria and guidelines. The CEU is an internationally accepted uniform unit of measurement in qualified courses of continuing education.

Haward Technology Middle East will award **3.0 CEUs** (Continuing Education Units) or **30 PDHs** (Professional Development Hours) for participants who completed the total tuition hours of this program. One CEU is equivalent to ten Professional Development Hours (PDHs) or ten contact hours of the participation in and completion of Haward Technology programs. A permanent record of a participant's involvement and awarding of CEU will be maintained by Haward Technology. Haward Technology will provide a copy of the participant's CEU and PDH Transcript of Records upon request.

### Course Instructor(s)

This course will be conducted by the following instructor(s). However, we have the right to change the course instructor(s) prior to the course date and inform participants accordingly:

**Mr. Ken Steel** is a **Senior Electrical & Instrumentation Engineer** with over **45 years** of extensive experience. His expertise widely covers **Electrical Motors Testing, Heat Tracing & Insulation Installation & Testing, HV Terminations, High & Low Voltages** on Overhead Cranes, **HV/MV Cable Splicing, Cable & Over Head Power Line, HV/MV Switchgear, HV Cable Design, Medium & High Voltage Equipment, High Voltage Circuit Breaker Inspection & Repair, High Voltage Power System, HV Equipment Inspection &**

**Maintenance, HV Switchgear Operation & Maintenance, Resin / Heat Shrink & Cold Shrink Joints, HV/LV Equipment, LV & HV Electrical System, Cable Splicing & Termination, High Voltage Electrical Safety, LV, MV & HV Cable Installations & Properties, LV Substation, MV & LV Cable, UPS Systems, MV & LV Direct on Line Motor Drives, MV & LV VSD Motor Drives, MV & LV Soft Starter Motor Drives, LV Two Speed Motor Drives, Underground Transformer Oil Containment Tank, Electrical & Instrumentation Construction Installation, 1500KW, 1000KW, 1752KW Diesel Power Plant Installation, 110KV Overhead Line, 110KV Outdoor Switchgear, 110KV/10KV 6500KVA Transformer, Transformer Substation, 1600KVA 10KV/0.4KV & 2 Off 1000KVA Diesel Generators, 1600KVA 10KV/0.4KV & 1650KVA Diesel Generator, 110KV/35KV/10KV Substation, 110KV/10KV Transformers, 110KV & 2 Off 6KV Overhead Lines, 34.5KV, 13.8KV, 4.16KV & 480V Switchgear, 4.16KV & 480V MCC, Transformers & Motor Drives Substations, Diesel Driven Generators, Overhead Cranes, Overhead Cranes & HVAC Units, AC & DC Drives, Data Logger, Electrical, Instrumentation & Mechanical Installation Maintenance, Slab Mills, Pre Heat Ovens, Hydraulic Shears, Stamping Machine, Gearboxes, Rollers, Pumps, Valves, Electro Magnets & Pump House Operation, Boilers Construction And Commissioning, Valve Calibration & Testing, Level Gauges, Pressure & Flow Transmitters Installation & Calibration, Pressure & Leak Testing of Boilers, Leak Testing, SMP, Elect, I&C, F&G, HVAC & Utility Services, Nitrogen Leak Test Operations, Steam Blowing Activities, SMP, Elect, I&C, F&G, HVAC & Utility Services, PTW Issue (PA/AC), Installation & Mechanical Piping and Hydro Testing & Leak Testing of Lines Installation.**

During Mr. Steel's career life, he has gained his practical experience through several significant positions and dedication as the **3GP PBF & Boilers SC Commission Support, SC Site Execution Superintendent, E&I Construction Superintendent, High Voltage Construction Supervisor, Control & Power Construction Supervisor, Electrical & Instrumentation Supervisor, Electrical Technician, Construction Support Electrical Engineer, E&I Engineer, Electrical/Instrumentation Site Supervisor, Q.A/Q.C Inspector, Electrical/ Instrumentation Technician, Maintenance Fitter Instrumentation Technician, Millwright, Apprentice Millwright and Senior Instructor/Lecturer** for Tengiz Chevron Oil Kazakhstan, Al Jubail Saudi Arabia, Escravos Delta state Nigeria, Lurgi S.A, SuD Chemie Sasol Catalysts, J C Groenewalds Construction (LTA), Tycon (Goodyear S.A.), Dragline Construction and Iscor Vanderbijlpark.

Mr. Steel has a **Diploma in Electronics Mechanic**. Further, he is a **Certified Instructor/Trainer** and delivered numerous trainings, courses, workshops, seminars and conferences internationally.

### **Training Methodology**

All our Courses are including **Hands-on Practical Sessions** using equipment, State-of-the-Art Simulators, Drawings, Case Studies, Videos and Exercises. The courses include the following training methodologies as a percentage of the total tuition hours:-

- 30% Lectures
- 20% Practical Workshops & Work Presentations
- 30% Hands-on Practical Exercises & Case Studies
- 20% Simulators (Hardware & Software) & Videos

In an unlikely event, the course instructor may modify the above training methodology before or during the course for technical reasons.

### **Course Fee**

**US\$ 5,500** per Delegate + **VAT**. This rate includes H-STK® (Haward Smart Training Kit), buffet lunch, coffee/tea on arrival, morning & afternoon of each day.

### **Accommodation**

Accommodation is not included in the course fees. However, any accommodation required can be arranged at the time of booking.

### **Course Program**

The following program is planned for this course. However, the course instructor(s) may modify this program before or during the course for technical reasons with no prior notice to participants. Nevertheless, the course objectives will always be met:

<b>Day 1:</b>	<b>Sunday, 20<sup>th</sup> of July 2025</b>
0730 – 0800	Registration & Coffee
0800 – 0815	Welcome & Introduction
0815 – 0830	<b>PRE-TEST</b>
0830 – 0930	<b>Overview of Electrical Heat Tracing</b> Definition & Purpose of Heat Tracing • Applications in Petroleum Industries • Key Components of a Heat Trace System • Basic Principles of Heat Transfer
0930 – 0945	Break
0945 – 1040	<b>Types of Electrical Heat Tracing Systems</b> Self-Regulating Heat Tracing Cables • Constant Wattage Heat Tracing Cables • Mineral-Insulated (MI) Heat Tracing Cables • Series Resistance Heating Cables
1040 – 1135	<b>Heat Tracing Standards &amp; Regulations</b> Overview of IEEE 515 & IEC 60079-30-1 Standards • Industry Best Practices for Heat Tracing Installation • Regulatory Compliance for Hazardous Areas • Safety & Operational Guidelines
1135 - 1230	<b>Heat Tracing Components &amp; Accessories</b> Heating Cables & Power Connections • Junction Boxes & Connection Kits • End Seals & Splicing Techniques • Controllers & Thermostats
1230 - 1245	Break

1245 – 1335	<b>Heat Tracing Applications in the Petroleum Industry</b> Flow Assurance in Pipelines • Preventing Wax & Hydrate Formation • Tank & Vessel Heating • Instrumentation & Process Line Protection
1335 - 1420	<b>Basics of Heat Loss Calculation</b> Understanding Heat Loss Principles • Factors Affecting Heat Loss • Pipe Material & Insulation Considerations • Selecting the Right Heat Tracing Solution
1420 – 1430	<b>Recap</b> Using this Course Overview, the Instructor(s) will Brief Participants about the Topics that were Discussed Today and Advise Them of the Topics to be Discussed Tomorrow
1430	Lunch & End of Day One

**Day 2: Monday, 21<sup>st</sup> of July 2025**

0730 – 0830	<b>Electrical Load &amp; Power Supply Requirements</b> Voltage Requirements & Power Ratings • Single-Phase versus Three-Phase Power Supply • Electrical Load Balancing • Considerations for Long Pipeline Runs
0830 - 0930	<b>Cable Selection &amp; Sizing</b> Determining the Appropriate Heat Tracing Cable • Calculating Wattage Per Unit Length • Maximum Circuit Lengths • Selection Based on Ambient Conditions
0930 – 0945	Break
0945 – 1040	<b>Temperature Control &amp; Monitoring</b> Types of Temperature Controllers • Role of Thermostats in Heat Tracing Systems • Sensor Placement & Calibration • Smart Control Systems & Remote Monitoring
1040 – 1135	<b>Insulation &amp; Cladding Requirements</b> Types of Insulation Materials • Effect of Insulation on Heat Loss • Cladding Materials & Protection Methods • Thermal Insulation Thickness Calculations
1135 - 1230	<b>Grounding &amp; Electrical Safety</b> Importance of Proper Grounding in Heat Tracing Systems • Protection Against Short Circuits & Electrical Faults • Ground Fault Protection Devices (GFPE) • Safety Compliance for Electrical Systems
1230 - 1245	Break
1245 - 1420	<b>Design Considerations for Hazardous Areas</b> Classifying Hazardous Zones (Zone 0, 1, 2) • Explosion-Proof & Intrinsically Safe Installations • ATEX & IECEx Certification Requirements • Selecting Heat Tracing Cables for Hazardous Locations
1420 – 1430	<b>Recap</b> Using this Course Overview, the Instructor(s) will Brief Participants about the Topics that were Discussed Today and Advise Them of the Topics to be Discussed Tomorrow
1430	Lunch & End of Day Two

**Day 3: Tuesday, 22<sup>nd</sup> of July 2025**

0730 – 0830	<b>Pre-Installation Planning &amp; Site Preparation</b> Reviewing Engineering Drawings & Schematics • Identifying Power Supply Points • Preparing Surfaces & Mounting Locations • Pre-Installation Testing & Verification
0830 – 0930	<b>Proper Installation of Heat Tracing Cables</b> Step-By-Step Cable Laying Procedures • Securing Cables to Pipes & Equipment • Avoiding Mechanical Stress & Damage • Adhering to Manufacturer Installation Guidelines
0930 – 0945	Break
0945 – 1040	<b>Splicing, Termination, &amp; Connection Methods</b> Proper Use of Termination Kits • Cold Lead Connection & Power Supply Integration • Testing Connections for Continuity & Insulation Resistance • Preventing Moisture Ingress & Corrosion
1040 – 1135	<b>Controller &amp; Sensor Installation</b> Mounting Thermostats & Control Panels • Sensor Placement for Accurate Temperature Monitoring • Calibration & Testing of Controllers • Troubleshooting Controller Malfunctions
1135 - 1230	<b>Insulation &amp; Weatherproofing</b> Applying Insulation & Jacketing Materials • Proper Sealing Techniques for Moisture Protection • Identifying Weak Points & Potential Failures • Ensuring Compliance with Environmental Conditions
1230 - 1245	Break
1245 - 1420	<b>Post-Installation Testing &amp; Commissioning</b> Electrical Continuity & Insulation Resistance Tests • Checking Heat Output & Temperature Uniformity • Verifying Controller Functionality • Documenting & Reporting Installation Results
1420 – 1430	<b>Recap</b> Using this Course Overview, the Instructor(s) will Brief Participants about the Topics that were Discussed Today and Advise Them of the Topics to be Discussed Tomorrow
1430	Lunch & End of Day Three

**Day 4: Wednesday, 23<sup>rd</sup> of July 2025**

0730 – 0830	<b>Routine Inspection &amp; Preventive Maintenance</b> Scheduled Maintenance Activities • Identifying Early Signs of Failure • Cleaning & Inspecting Junction Boxes & Terminations • Recording & Analyzing System Performance Data
0830 - 0930	<b>Common Heat Tracing Failures &amp; Causes</b> Overheating & Insulation Damage • Electrical Faults & Short Circuits • Mechanical Damage & Wear • Environmental Degradation & Moisture Ingress
0930 – 0945	Break
0945 – 1040	<b>Troubleshooting Techniques</b> Using Thermal Imaging for Hot Spot Detection • Resistance & Continuity Testing • Checking Controllers & Temperature Sensors • Replacing Damaged Cables & Faulty Components
1040 – 1135	<b>Emergency Response &amp; Safety Procedures</b> Handling Heat Tracing System Failures in Hazardous Areas • Electrical Safety During Troubleshooting • Emergency Shutdown Procedures • Ensuring Compliance with Company's Safety Protocols

1135 - 1230	<b>Upgrading &amp; Retrofitting Existing Systems</b> <i>Evaluating Performance of Older Heat Tracing Systems • Integrating Modern Smart Controls • Upgrading Insulation for Improved Efficiency • Compliance with Updated Industry Standards</i>
1230 - 1245	Break
1245 - 1420	<b>Case Studies &amp; Real-World Applications</b> <i>Lessons Learned from Previous Heat Tracing Failures • Best Practices from Installations • Comparing Different Heat Tracing Technologies • Group Discussion &amp; Problem-Solving Exercises</i>
1420 - 1430	<b>Recap</b> <i>Using this Course Overview, the Instructor(s) will Brief Participants about the Topics that were Discussed Today and Advise Them of the Topics to be Discussed Tomorrow</i>
1430	Lunch & End of Day Four

**Day 5: Thursday, 24<sup>th</sup> of July 2025**

0730 - 0830	<b>Practical Hands-on Cable Installation</b> <i>Step-By-Step Installation of Heat Tracing Cables • Proper Termination &amp; Splicing Methods • Verifying Cable Placement &amp; Securing Techniques • Testing Continuity &amp; Resistance</i>
0930 - 0945	Break
0945 - 1100	<b>Configuring &amp; Calibrating Controllers</b> <i>Programming Temperature Controllers • Setting Up Alarm Systems • Sensor Placement Adjustments • Testing &amp; Validating Control Accuracy</i>
1100 - 1230	<b>Insulation &amp; Weatherproofing Application</b> <i>Applying Insulation to Pipes &amp; Vessels • Sealing Techniques for Different Environments • Identifying Vulnerabilities in Insulation Applications • Quality Assurance Checks</i>
1230 - 1245	Break
1245 - 1300	<b>Troubleshooting Real-World Scenarios</b> <i>Simulating Common Faults in Heat Tracing Systems • Diagnosing &amp; Fixing Issues Using Testing Tools • Hands-On Practice with Resistance &amp; Continuity Testing • Implementing Corrective Actions</i>
1300 - 1345	<b>Safety Demonstrations &amp; Best Practices</b> <i>Demonstrating Safe Electrical Work Procedures • Handling Emergency Shutdowns • PPE Selection &amp; Usage • Safe Troubleshooting Practices</i>
1345 - 1400	<b>Course Conclusion</b> <i>Using this Course Overview, the Instructor(s) will Brief Participants about the Course Topics that were Covered During the Course</i>
1400 - 1415	<b>POST-TEST</b>
1415 - 1430	Presentation of Course Certificates
1430	Lunch & End of Course

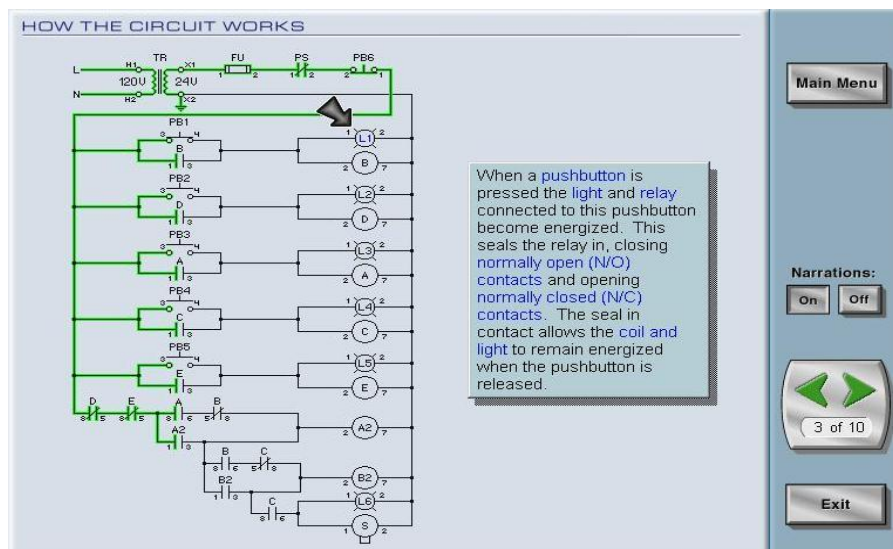

### Simulators (Hands-on Practical Sessions)

Practical sessions will be organized during the course for delegates to practice the theory learnt. Delegates will be provided with an opportunity to carryout various exercises using our state-of-the-art simulators “Haward Troubleshooting”, “Power World”, “GE Multilin Relay 469” and “GE Multilin Relay 750”.

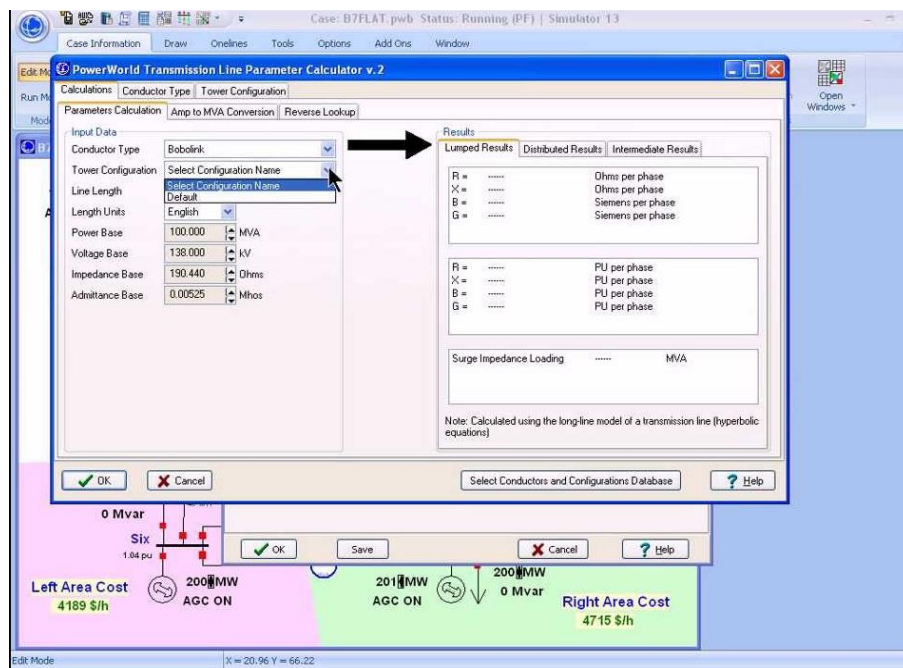

### Basic Techniques

### Basic Control Circuits

**Motor Control Techniques**
