

# **COURSE OVERVIEW DE0162-4D Electrical Submersible Pumps**

# **Course Title**

**Electrical Submersible Pumps** 

#### **Course Date/Venue**

November 25-28, 2024/ Al Aziziya Hall, The Proud Hotel Al Khobar, Al Khobar, KSA

Course Reference DE0162-4D

**Course Duration/Credits** 

Four days/2.4 CEUs/24 PDHs

**Course Description** 

This practical and highly-interactive course includes real-life case studies and exercises where participants will be engaged in a series of interactive small groups and class workshops.

Electrical Submersible Pump (ESP) is perhaps the most versatile and profitable piece of equipment in a petroleum company's arsenal. ESP is considered an effective and economical means of lifting large volume of fluids from great depths under a variety of well conditions. It has advantages over some other high-volume methods since it can create a higher drawdown on the formation and achieve more production. ESP major problems are the gas interference and the sand production. Nevertheless, the ESP companies, in conjunction with the major oil companies, have gained considerable experience in producing high viscosity fluids from gassy wells, sandy wells and high temperature wells. With this experience and improved technology, wells that were once considered non-feasible and submersibles are now being pumped economically.

This course is designed to provide participants with a detailed and up-to-date overview on the application engineering of electrical submersible pumps. It covers the ESP systems and operations, head generation, impeller types and characteristics; the components of ESP system from surface to downhole sensor including their functions, limitations and operating principles; the equipment and accessories that make up the electric submersible pumping system; the main components of the ESP and their use and functions.

Further, the course will also discuss the pump, transformers, controllers, VSD functions and benefits; the wellhead, tubing cable, cable guards, motor lead cable and intake/gas separator; the equalizer/protector, motor and instrumentation; the ESP installation considerations and cautions of standards and non-standards applications; the ESP installation procedures, reservoir formation and well considerations; the installation cautions and limitations; the design of an ESP system to fit current and future well conditions; the sizing principles for ESP artificial lift design and diagnosis; the ESP design procedure, sensitivity analysis and mechanical and electrical considerations; the steps to correctly size an electric submersible pump example problem; the impact on well and reservoir of ESP operation and the use of Nodal™ analysis in ESP applications; the effects of gas on the performance of ESP; the amount of free gas present at the pump intake; the probability of gas interference and the appropriate measures to prevent gas locking; the problems sizing equipment for gassy wells and the ESP analysis and diagnostic; the diagnostic from installed instrumentation; and using diagnostic computer programs.

During this intellective course, participants will learn the effects of viscosity on the performance of submersible pumps; the example problem in an application of a field with heavy oil properties to predict pump and motor performance; the ESP monitoring and maintenance, ESP troubleshooting, repair of failed components and ESP isolation and shutdown; the controls for ESP systems including variable speed drives; the ESP instrumentation available in the industry; the SCADA system, telemetry, PLC, ESD, VSD and troubleshooting; the ESP failure analysis, DIFA procedures, ESP inspection and failure mode; the data, record keeping and data analysis; the effects of artificial lift and ESP on project economics; the data analysis and interpretation examples; the optimization of ESP applications to improve project economics; the prediction of ESP performance under varying well and reservoir conditions; the analysis and diagnosis of real field examples from participants; and the presentations, concluding remarks from teams and the latest advances on ESP technology.

#### **Course Objectives**

Upon the successful completion of this course, each participant will be able to:-

- Apply and gain a comprehensive knowledge on electrical submersible pumps application engineering
- Discuss the description of all components of ESP system starting at surface to the downhole sensor describing their functions, limitations and operating principles
- Explain ESP installation considerations and cautions of standards and non-standards applications
- Discuss ESP analysis and diaganostic including VSD functions and benefits
- Employ ESP monitoring and maintenance as well as ESP failure analysis and DIFA procedures
- Carryout ESP systems and operation and discuss the principles of ESP operation, head generation, impeller types and characteristics
- Identify the equipment and accessories that make up the electric submersible pumping system and the main components of the ESP including their use and function

- Recognize pump, transformers and controllers, wellhead, tubing cable and cable guards, motor lead cable and intake/gas separator, equalizer/protector, motor and instrumentation
- Carryout ESP installation procedures, reservoir formation, well considerations, installation cautions and limitations
- Illustrate the design of an ESP system to fit current and future well conditions, sizing principles for ESP artificial lift design and diagnosis and ESP design procedure and sensitivity analysis
- Identify mechanical and electrical considerations, the steps to correctly size an electric submersible pump example problem and a similar example to size an ESP
- Determine the impact on well and reservoir of ESP operation and use Nodal™ analysis in ESP applications
- Recognize the effects of gas on the performance of ESP as well as the amount of free gas present at the pump intake and the probability of gas interference
- Establish appropriate measures to prevent gas locking and solve problems sizing equipment for gassy wells
- Use diagnostic from installed instrumentation and diagnostic computer programs
- Identify the effects of viscosity on the performance of submersible pumps and example problem in an application of a field with heavy oil properties to predict pump and motor performance
- Carryout ESP troubleshooting and repair of failed components
- Apply ESP isolation and shutdown, controls for ESP systems including variable speed drives and ESP instrumentation available in the industry
- Carryout SCADA system, telemetry, PLC, ESD, VSD and troubleshooting as well as ESP inspection and failure mode
- Apply data, record keeping and data analysis and identify the effects of artificial lift and ESP on project economics, data analysis and interpretation examples
- Optimize ESP applications to improve project economics and carryout prediction of ESP performance under varying well and reservoir conditions
- Implement analysis and diagnosis of real field examples, present and conclude, remarks from teams and recognize the latest advances on ESP technology

# **Who Should Attend**

This course provides an overview of all significant aspects and considerations of electrical submersible pumps for petroleum engineers, production engineers and field staff who are responsible for the selection, operation and maintenance of ESP.

# Exclusive Smart Training Kit - H-STK®

Participants of this course will receive the exclusive "Haward Smart Training Kit" (H-STK®). The H-STK® consists of a comprehensive set of technical content which includes **electronic version** of the course materials, sample video clips of the instructor's actual lectures & practical sessions during the course conveniently saved in a **Tablet PC**.

# Course Certificate(s)

Internationally recognized certificates will be issued to all participants of the course who completed a minimum of 80% of the total tuition hours.

#### **Certificate Accreditations**

Certificates are accredited by the following international accreditation organizations: -

The International Accreditors for Continuing Education and Training (IACET - USA)

Haward Technology is an Authorized Training Provider by the International Accreditors for Continuing Education and Training (IACET), 2201 Cooperative Way, Suite 600, Herndon, VA 20171, USA. In obtaining this authority, Haward Technology has demonstrated that it complies with the ANSI/IACET 2018-1 Standard which is widely recognized as the standard of good practice internationally. As a result of our Authorized Provider membership status, Haward Technology is authorized to offer IACET CEUs for its programs that qualify under the ANSI/IACET 2018-1 Standard.

Haward Technology's courses meet the professional certification and continuing education requirements for participants seeking Continuing Education Units (CEUs) in accordance with the rules & regulations of the International Accreditors for Continuing Education & Training (IACET). IACET is an international authority that evaluates programs according to strict, research-based criteria and guidelines. The CEU is an internationally accepted uniform unit of measurement in qualified courses of continuing education.

Haward Technology Middle East will award 2.4 CEUs (Continuing Education Units) or 24 PDHs (Professional Development Hours) for participants who completed the total tuition hours of this program. One CEU is equivalent to ten Professional Development Hours (PDHs) or ten contact hours of the participation in and completion of Haward Technology programs. A permanent record of a participant's involvement and awarding of CEU will be maintained by Haward Technology. Haward Technology will provide a copy of the participant's CEU and PDH Transcript of Records upon request.

# British Accreditation Council (BAC)

Haward Technology is accredited by the British Accreditation Council for Independent Further and Higher Education as an International Centre. BAC is the British accrediting body responsible for setting standards within independent further and higher education sector in the UK and overseas. As a BAC-accredited international centre, Haward Technology meets all of the international higher education criteria and standards set by BAC.

#### Accommodation

Accommodation is not included in the course fees. However, any accommodation required can be arranged at the time of booking.

#### Course Instructor(s)

This course will be conducted by the following instructor(s). However, we have the right to change the course instructor(s) prior to the course date and inform participants accordingly:

Dr. Chris Kapetan, PhD, MSc, is a Senior Drilling & Petroleum Engineer with 40 years of international experience within the onshore and offshore oil & gas industry. His wide experience covers Enhanced Oil Recovery (EOR), Electrical Submersible Pumps (ESP), Cased Hole Logging Interpretation, Cased Hole Formation Evaluation, Cased Hole Applications, Data Acquisition in Cased-hole Logging, Drill String Design & Drilling Optimization, Drill String Design Calculations, Enhanced Oil Recovery (EOR), Improved Oil Recovery (IOR), Performance Analysis, Prediction, and Optimization Using NODAL Analysis, Stuck Pipe Prevention, Stuck Piping & Fishing Operation, Fishing Operations,

Fishing Techniques, Fishing Methodologies, Wireline Fishing Procedures, Wireline & Coil Tubing, Coiled Tubing Fishing Operation, Coiled Tubing Technology, Fishing Options in Horizontal Wells, Horizontal & Multilateral Wells, Well Completion & Stimulation, Artificial Lift System Selection & Design, Drilling Practices, Drilling Fluids Technology, Drilling Operations, Simulation Program for The International Petroleum Business, International Oil Supply, Transportation, Refining & Trading, Crude Oil Types & Specifications, Sulphur, Sour Natural Gas, Natural Gas Sweeting, Petroleum Production, Field Layout, Production Techniques & Control, Surface Production Operations, Oil Processing, Oil Transportation-Methods, Flowmetering & Custody Transfer and Oil Refinery. Further, he is also well-versed in Oil Industries Orientation, Geophysics, Production Operations, Production Management, Perforating Methods & Design, Perforating Operations, Completions & Workover, Rig Sizing, Hole Cleaning & Logging, Well Completion, Servicing and Work-Over Operations, Practical Reservoir Engineering, Cathodic Protection as well as Root Cause Analysis (RCA), Root Cause Failure Analysis (RCFA), Gas Conditioning & Process Technology, Production Safety and Delusion of Asphalt. Currently, he is the Operations Consultant & the Technical Advisor at GEOTECH and an independent Drilling Operations Consultant of various engineering services providers to the international clients as he offers his expertise in many areas of the drilling & petroleum discipline and is well recognized & respected for his process and procedural expertise as well as ongoing participation, interest and experience in continuing to promote technology to producers around the world.

Throughout his long career life, Dr. Chris has worked for many international companies and has spent several years managing technically complex wellbore interventions in both drilling & servicing. He is a well-regarded for his process and procedural expertise. Further, he was the Operations Manager at ETP Crude Oil Pipeline Services where he was fully responsible for optimum operations of crude oil pipeline, workover and directional drilling, drilling rigs and equipment, drilling of various geothermal deep wells and exploration wells. Dr. Chris was the Drilling & Workover Manager & Superintendent for Kavala Oil wherein he was responsible for supervision of drilling operations and offshore exploration, quality control of performance of rigs, coiled tubing, crude oil transportation via pipeline and abandonment of well as per the API requirements. He had occupied various key positions as the Drilling Operations Consultant, Site Manager, Branch Manager, Senior Drilling & Workover Manager & Engineer and Drilling & Workover Engineer, Operations Consultant, Technical Advisor in several petroleum companies responsible mainly on an offshore sour oil field (under water flood and gas lift) and a gas field. Further, Dr. Chris has been a Professor of the Oil Technology College.

Dr. Chris has PhD in Reservoir Engineering and a Master's degree in Drilling & Production Engineering from the Petrol-Gaze Din Ploiesti University. Further, he is a Certified Surfaced BOP Stack Supervisor of IWCF, a Certified Instructor/Trainer, a Certified Trainer/Assessor/Internal Verifier by the Institute of Leadership & Management (ILM) and has conducted numerous short courses, seminars and workshops and has published several technical books on Production Logging, Safety Drilling Rigs and Oil Reservoir.

### **Training Methodology**

All our Courses are including **Hands-on Practical Sessions** using equipment, State-of-the-Art Simulators, Drawings, Case Studies, Videos and Exercises. The courses include the following training methodologies as a percentage of the total tuition hours:-

30% Lectures

20% Practical Workshops & Work Presentations

30% Hands-on Practical Exercises & Case Studies

20% Simulators (Hardware & Software) & Videos

In an unlikely event, the course instructor may modify the above training methodology before or during the course for technical reasons.

# **Course Fee**

**US\$ 6,750** per Delegate + **VAT**. This rate includes H-STK® (Haward Smart Training Kit), buffet lunch, coffee/tea on arrival, morning & afternoon of each day

## **Course Program**

The following program is planned for this course. However, the course instructor(s) may modify this program before or during the course for technical reasons with no prior notice to participants. Nevertheless, the course objectives will always be met:

Day 1: Monday 25<sup>th</sup> of November 2024

Day I.	Monday 25 Of November 2024
0730 - 0800	Registration & Coffee
0800 - 0815	Welcome & Introduction
0815 - 0830	PRE-TEST
0830 - 0900	ESP Systems Overview & Operation
0900 - 0930	Principles of ESP Operation, Head Generation, Impeller Types & Characteristics
0930 - 0945	Break
0945 – 1015	Components of ESP System from Surface to Downhole Sensor Describing their Functions, Limitations & Operating Principles
1015 – 1045	Equipment & Accessories that Make Up the Electric Submersible Pumping System
1045 - 1115	The Main Components of the ESP & Their Use and Function
1115 – 1145	Pump, Transformers & Controllers
1145 – 1215	VSD Functions & Benefits
1215 – 1230	Break
1230 - 1300	Wellhead, Tubing Cable & Cable Guards
1300 - 1330	Motor Lead Cable & Intake/Gas Separator
1330 – 1345	Equalizer/Protector, Motor & Instrumentation
1345 - 1400	ESP Installation Considerations & Cautions of Standards & Non-Standards Applications
1400 - 1420	ESP Installation Procedures
1420 – 1430	Recap
1430	Lunch & End of Day One

Day 2: Tuesday 26 <sup>th</sup> o	of November 2024
-----------------------------------	------------------

0730 - 0800	Reservoir Formation & Well Considerations
0800 - 0830	Installation Cautions & Limitations
0830 - 0900	Design of an ESP System to Fit Current & Future Well Conditions
0900 - 0930	Sizing Principles for ESP Artificial Lift Design & Diagnosis
0930 - 0945	Break
0945 - 1030	ESP Design Procedure & Sensitivity Analysis
1030 - 1100	Mechanical & Electrical Considerations
1100 – 1130	The Steps to Correctly Size an Electric Submersible Pump Example
1100 - 1150	Problem
1130 – 1215	Participants will use a Similar Example to Size an ESP
1215 – 1230	Break
1230 - 1300	Impact on Well and Reservoir of ESP Operation
1300 - 1330	Use of Nodal™ Analysis in ESP Applications
1330 - 1400	The Effects of Gas on the Performance of ESP
1400 - 1420	Amount of Free Gas Present at the Pump Intake
1420 - 1430	Recap
1430	Lunch & End of Day Two

Wednesday 27th of November 2024 Dav 3:

Day S.	Wednesday 27 Of November 2024
0730 - 0815	Probability of Gas Interference
0815 - 0845	Appropriate Measures to Prevent Gas Locking
0845 - 0900	Problems Sizing Equipment for Gassy Wells
0900 - 0930	ESP Analysis & Diagnostic
0930 - 0945	Break
0945 - 1030	Diagnostic from Installed Instrumentation
1030 - 1100	Using Diagnostic Computer Programs
1100 - 1130	Effects of Viscosity on the Performance of Submersible Pumps
1130 – 1200	Example Problem in an Application of a Field with Heavy Oil
	Properties to Predict Pump & Motor Performance
1200 - 1215	ESP Monitoring & Maintenance
1215 - 1230	Break
1230 - 1300	ESP Troubleshooting
1300 - 1330	Repair of Failed Components
1330 - 1400	ESP Isolation & Shutdown
1400 - 1420	Controls for ESP Systems including Variable Speed Drives
1420 - 1430	Recap
1430	Lunch & End of Day Three

Day 4: Thursday 26th of November 2024

0730 - 0800	ESP Instrumentation Available in the Industry
0800 - 0830	SCADA System, Telemetry, PLC, ESD, VSD & Troubleshooting
0830 - 0900	ESP Failure Analysis & DIFA Procedures
0900 - 0930	ESP Inspection & Failure Mode
0930 - 0945	Break
0945 - 1015	Data, Record Keeping & Data Analysis
1015 - 1045	Effects of Artificial Lift & ESP on Project Economics
1045 - 1115	Data Analysis & Interpretation Examples
1115 - 1145	Optimization of ESP Applications to Improve Project Economics

1145 - 1215	Class Exercise on the Prediction of ESP Performance Under Varying
	Well & Reservoir Conditions
1215 - 1230	Break
1230 - 1300	Analysis & Diagnosis of Real Field Examples from Participants
1300 - 1330	Presentations & Concluding Remarks from Teams
1330 - 1345	Latest Advances on ESP Technology
1345 - 1400	Course Conclusion
1400 – 1415	POST-TEST
1415 - 1430	Presentation of Course Certificates
1430	Lunch & End of Course

Practical Sessions
This practical and highly-interactive course includes real-life case studies and exercises:-
