

COURSE OVERVIEW RE0140

Machinery Failure Analysis, Prevention & Troubleshooting

Machinery Diagnostics and Root Cause Failure Analysis (RCFA)

Course Title

Machinery Failure Analysis, Prevention & Troubleshooting: *Machinery Diagnostics and Root Cause Failure Analysis (RCFA)*

Course Date/Venue

Please refer to page 3

Course Reference

RE0140

Course Duration/Credits

Five days/3.0 CEUs/30 PDHs

Course Description

This practical and highly-interactive course includes various practical sessions and exercises. Theory learnt will be applied using our state-of-the-art simulators.

The course presents a systematic approach to fault diagnosis and failure prevention in a broad range of machinery used in the Oil/Gas, Petrochemical and other process industries. The key approaches to preventive maintenance are demonstrated through both overview and the study of examples in metallurgical failure analysis, vibration analysis and a sequential approach to machinery troubleshooting and problem solving.

Equipment failure events will be reviewed and participants are encouraged to bring to the course relevant assembly drawings or such components as failed bearings, gears, mechanical seals and similar machine elements for failure analysis and discussion.

The course explores a systematic approach to successful failure analysis and troubleshooting, including the determination of goals, use of checklists and setting up a failure analysis team.

By reference to specific case studies, especially dealing with centrifugal pumps, it will be shown that such a systematic program can lead to significant failure reductions in many types of machinery.

Through examples dealing with pumps and compressors, guidance is given on vendor selection and methods for reliability review.

A matrix approach to machinery troubleshooting uses illustrative examples in pumps, centrifugal compressors, blowers and fans, reciprocating compressors, engines and gas turbines. Next, a systematic approach to generalized machinery problem-solving is described in terms of situation analysis, cause analysis, action generation, decision making and planning for change. Finally, a highly effective root cause failure analysis (RCFA) method is explained in detail.

At the end of the course, participants will gain an understanding of structured, results-oriented root cause failure analysis methods for all types of machine components and entire machinery systems. Participants will also learn how parts fail, why they fail in a given mode and how to prevent failures. Participants will acquire a thorough understanding of making the best possible use of available failure statistics and how these can be used in a conscientiously applied comprehensive program of specifying, purchasing, installing, commissioning and operating machinery.

Course Objectives

Upon the successful completion of this course, each participant will be able to: -

- Execute system approach of failure analysis and troubleshooting and identify the causes of machinery failure and their contributing factors which are often overlooked
- Gain an in-depth knowledge on metallurgical failure analysis methodology as illustrated by failure analysis of bolted joints and shafts
- Perform machinery component analysis and reliability improvement by recognizing redesigned opportunities, bearings in distress, coupling failure avoidance opportunities and mechanical seal problems
- Develop an understanding of continuous reliability improvement and the various approaches to optimized lubrication for pumps and electric motors
- Apply and gain an understanding on vendor selection and reliability review methods through centrifugal pump selection & compressor reliability review examples and perform troubleshooting of pumps and centrifugal compressors
- Recognize the application of vibration analysis from a management perspective by studying specific machinery problems, as well as monitoring and analysis methods
- Identify and carryout a structured problem-solving sequence after careful perusal of problem-solving elements, cause analysis, action generation, decision making and planning for change

- Perform formalized failure reporting using actual cases such as high-speed pump and bearing failures
- Determine the process of examination of failed components such as bearings, gears, mechanical seals and others
- List the elements of centrifugal pump failure reduction programs taking into account the process and the mechanical & technical interactions

Exclusive Smart Training Kit - H-STK®

Participants of this course will receive the exclusive “Haward Smart Training Kit” (H-STK®). The H-STK® consists of a comprehensive set of technical content which includes **electronic version** of the course materials conveniently saved in a **Tablet PC**.

Who Should Attend

This course covers systematic techniques and methodologies in machinery failure analysis, prevention and troubleshooting for those who work with mechanical and rotating equipment at industrial plants, utilities, production oil/gas field or manufacturing facilities. General maintenance personnel, engineers and other technical staff from a wide variety of industries, skill-levels, company sizes and job titles will also find this course extremely useful.

Course Date/Venue

Session(s)	Date	Venue
1	April 26-30, 2026	Crowne Meeting Room, Crowne Plaza Al Khobar, an IHG Hotel, Al Khobar, KSA
2	June 22-26, 2026	Glasshouse Meeting Room, Grand Millennium Al Wahda Hotel, Abu Dhabi, UAE
3	September 27- October 01, 2026	Tamra Meeting Room, Al Bandar Rotana Creek, Dubai, UAE
4	December 20-24, 2026	Meclis 1 Meeting Room, Divan Istanbul Sisli, Istanbul, Turkey

Course Fee

Istanbul	US\$ 6,000 per Delegate + VAT . This rate includes H-STK® (Haward Smart Training Kit), buffet lunch, coffee/tea on arrival, morning & afternoon of each day.
Al Khobar/Abu Dhabi/Dubai	US\$ 5,500 per Delegate + VAT . This rate includes H-STK® (Haward Smart Training Kit), buffet lunch, coffee/tea on arrival, morning & afternoon of each day.

Course Certificate(s)

Internationally recognized certificates will be issued to all participants of the course who completed a minimum of 80% of the total tuition hours.

Certificate Accreditations

Haward's certificates are accredited by the following international accreditation organizations: -

-  British Accreditation Council (BAC)

Haward Technology is accredited by the **British Accreditation Council** for **Independent Further and Higher Education** as an **International Centre**. Haward's certificates are internationally recognized and accredited by the British Accreditation Council (BAC). BAC is the British accrediting body responsible for setting standards within independent further and higher education sector in the UK and overseas. As a BAC-accredited international centre, Haward Technology meets all of the international higher education criteria and standards set by BAC.

-  The International Accreditors for Continuing Education and Training (IACET - USA)

Haward Technology is an Authorized Training Provider by the International Accreditors for Continuing Education and Training (IACET), 2201 Cooperative Way, Suite 600, Herndon, VA 20171, USA. In obtaining this authority, Haward Technology has demonstrated that it complies with the **ANSI/IACET 2018-1 Standard** which is widely recognized as the standard of good practice internationally. As a result of our Authorized Provider membership status, Haward Technology is authorized to offer IACET CEUs for its programs that qualify under the **ANSI/IACET 2018-1 Standard**.

Haward Technology's courses meet the professional certification and continuing education requirements for participants seeking **Continuing Education Units** (CEUs) in accordance with the rules & regulations of the International Accreditors for Continuing Education & Training (IACET). IACET is an international authority that evaluates programs according to strict, research-based criteria and guidelines. The CEU is an internationally accepted uniform unit of measurement in qualified courses of continuing education.

Haward Technology Middle East will award **3.0 CEUs** (Continuing Education Units) or **30 PDHs** (Professional Development Hours) for participants who completed the total tuition hours of this program. One CEU is equivalent to ten Professional Development Hours (PDHs) or ten contact hours of the participation in and completion of Haward Technology programs. A permanent record of a participant's involvement and awarding of CEU will be maintained by Haward Technology. Haward Technology will provide a copy of the participant's CEU and PDH Transcript of Records upon request.

Course Instructor(s)

This course will be conducted by the following instructor(s). However, we have the right to change the course instructor(s) prior to the course date and inform participants accordingly:

Mr. Daniel Williams, PE, BSc, is a Senior Mechanical & Maintenance Engineer with over 30 years of reliability & maintenance experience. His expertise covers Valve Selection & Sizing, Pressure Relief Value (PRV) & Pressure Safety Valve (PSV) Design of Operation, Valves & Safety Devices Maintenance & Troubleshooting, PRV & PSV Inspection & Testing, Pressure Vessels Design, Advanced Fluid Mechanics, Valve Actuation & Control System, Safety Protocols & Emergency Shut-off Systems, Valve Engineering Codes & Standards, Diesel Engine Operations, Centrifugal Pumps & Troubleshooting, Reciprocating & Centrifugal Compressors, Screw Compressor, Compressor Control & Protection, Gas & Steam Turbines, Turbine Operations, Gas Turbine Technology, Valves, Process Control Valves, Bearings & Lubrication, Heat Transfer, Machine Design, Fluid Mechanics, Heating & Cooling Systems, Heat Insulation Systems, Heat Exchanger & Cooling Towers, Maintenance Planning & Scheduling, Maintenance Planning Process, Maintenance Shutdown & Turnaround, Maintenance Audit Best Practices, Maintenance & Reliability Management, Reliability Engineering, Maintenance & Reliability Best Practices, Reliability, Availability & Maintainability (RAM), Root Cause Analysis, Maintenance Process, Gearboxes, CMMS (SAP, MAXIMO, ELLIPSE), Maintenance & Reliability Management, Machinery Root Cause Failure Analysis (RCFA), Lubrication Technology, Rotating, Auxiliary & Static Equipment such as Pump, Valve, Compressor, Pipe, Piping, Turbines, Bearings, Blower, Fan and Heat Exchanger, Hydraulic Systems, Material Cataloguing & Specifications, Vibration Analysis, Preventive Maintenance and Condition Based Monitoring.

Mr. Williams worked with several international companies in **North America, South America, Europe, Australia and Asia**. He occupied significant positions such as a **Maintenance Manager, Product Manager, Senior Mechanical Projects Engineer, Mechanical Engineer, Maintenance Engineer, Maintenance Planning Superintendent, Maintenance & Reliability Superintendent, Senior Maintenance Planner, Maintenance Planner, Materials Specialist, Maintenance Improvement Process Co-Coordinator, Mechanic Operator and Instructor/Trainer.**

Mr. Williams has a **Bachelor's** degree in **Mechanical Engineering** from the **University of Arizona, USA**. Further, he is a **Certified Instructor/Trainer**, a **Certified Internal Verifier/Assessor/Trainer** by the **Institute of Leadership & Management (ILM)** and has delivered various trainings, workshops, seminars, courses and conferences internationally.

Training Methodology

All our Courses are including **Hands-on Practical Sessions** using equipment, State-of-the-Art Simulators, Drawings, Case Studies, Videos and Exercises. The courses include the following training methodologies as a percentage of the total tuition hours:-

- 30% Lectures
- 20% Practical Workshops & Work Presentations
- 30% Hands-on Practical Exercises & Case Studies
- 20% Simulators (Hardware & Software) & Videos

In an unlikely event, the course instructor may modify the above training methodology before or during the course for technical reasons.

Accommodation

Accommodation is not included in the course fees. However, any accommodation required can be arranged at the time of booking.

Course Program

The following program is planned for this course. However, the course instructor(s) may modify this program before or during the course for technical reasons with no prior notice to participants. Nevertheless, the course objectives will always be met:

Day 1

0730 – 0800	<i>Registration & Coffee</i>
0800 – 0815	<i>Welcome & Introduction</i>
0815 – 0830	PRE-TEST
0830 - 0930	<i>The Failure Analysis & Troubleshooting System</i> <i>Causes of Machinery Failure • Contributing Factors Often Overlooked</i>
0930 - 0945	<i>Break</i>
0945 - 1200	<i>Metallurgical Failure Analysis Methodology</i> <i>Failure Analysis of Bolted Joints • Shaft Failures & Their Origins • Ductile vs. Brittle Failures of Shafts • Stress Raisers in Shafts</i>
1200 – 1300	<i>Machinery Component Analysis & Reliability Improvement</i> <i>Redesign Opportunities</i>
1300 - 1315	<i>Break</i>
1315 - 1420	<i>Machinery Component Analysis & Reliability Improvement (cont'd)</i> <i>Analyzing Wear Failures • Bearings in Distress</i>
1420 - 1430	<i>Recap</i> <i>Using this Course Overview, the Instructor(s) will Brief Participants about the Topics that were Discussed Today & Advise Them of the Topics to be Discussed Tomorrow</i>
1430	<i>Lunch & End of Day One</i>

Day 2

0730 - 0930	Machinery Component Analysis & Reliability Improvement (cont'd) Rolling Element Bearing (AFB) & Bearing Failure Analysis • Journal & Tilt-Thrust Bearings • Gear Failure Analysis
0930 - 0945	Break
0945 - 1200	Machinery Component Analysis & Reliability Improvement (cont'd) Coupling Failure Avoidance • Determining the Cause of Mechanical Seal Distress
1200 - 1300	Machinery Component Analysis & Reliability Improvement (cont'd) Mechanical Seal Selection Strategies
1300 - 1315	Break
1315 - 1420	Machinery Component Analysis & Reliability Improvement (cont'd) O-Ring Failures & Their Causes
1420 - 1430	Recap Using this Course Overview, the Instructor(s) will Brief Participants about the Topics that were Discussed Today & Advise Them of the Topics to be Discussed Tomorrow
1430	Lunch & End of Day Two

Day 3

0730 - 0930	Continuous Reliability Improvement Optimized Lubrication for Pumps & Electric Motors • Economics of Dry Sump Oil Mist Lubrication
0930 - 0945	Break
0945 - 1200	Continuous Reliability Improvement (cont'd) Lubrication Considerations for Pump & Electric Motors • Major Machinery Lubrication Management
1200 - 1300	Vendor Selection & Reliability Review Methods Centrifugal Pump Selection Examples • Compressor Reliability Review Examples
1300 - 1315	Break
1315 - 1420	Machinery Troubleshooting The Matrix Approach to Machinery Troubleshooting • Pumps • Centrifugal Compressors • Blowers & Fans • Reciprocating Compressors • Engines • Gas Turbines & Others
1420 - 1430	Recap Using this Course Overview, the Instructor(s) will Brief Participants about the Topics that were Discussed Today & Advise Them of the Topics to be Discussed Tomorrow
1430	Lunch & End of Day Three

Day 4

0730 - 0930	Vibration Analysis - A Management Overview Specific Machinery Problems • Monitoring & Analysis Methods • Future Outlook
0930 - 0945	Break
0930 - 1200	Structured Problem Solving Sequence Review of Structured Problem Solving Elements • Cause Analysis, Action Generation, Decision Making & Planning for Change

1200 – 1300	Structured Problem Solving Sequence (cont'd) Root Cause Failure Analysis (RCFA) Principles
1300 - 1315	Break
1315 – 1420	Formalized Failure Reporting as a Teaching Tool Actual Cases Cited & Explained in Detail • High Speed Pump Failure & Bearing Failures
1420 – 1430	Recap Using this Course Overview, the Instructor(s) will Brief Participants about the Topics that were Discussed Today & Advise Them of the Topics to be Discussed Tomorrow
1430	Lunch & End of Day Four

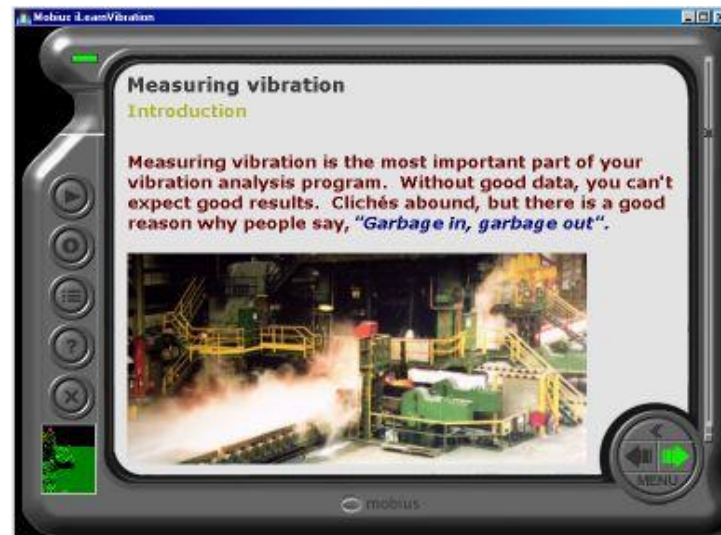

Day 5

0730 - 0930	Examination of Failed Components Bearings • Gears • Mechanical Seals & Others
0930 - 0945	Break
0945 - 1200	Process/Mechanical/Technical Interaction How PMT Teams Work • Turnaround Management • Preventive vs. Predictive Maintenance Concepts
1200 - 1300	Process/Mechanical/Technical Interaction (cont'd) Integrated vs. Separate Maintenance
1300 – 1315	Break
1315 - 1345	Process/Mechanical/Technical Interaction (cont'd) Centrifugal Pump Failure Reduction Programs
1345 - 1400	Course Conclusion Using this Course Overview, the Instructor(s) will Brief Participants about the Course Topics that were Covered During the Course
1400 - 1415	POST-TEST
1415 - 1430	Presentation of Course Certificates
1430	Lunch & End of Course

Simulator (Hands-on Practical Sessions)

Practical sessions will be organized during the course for delegates to practice the theory learnt. Delegates will be provided with an opportunity to carryout various exercises using the “iLearnVibration” simulator.

iLearnVibration Simulator

Course Coordinator

Mari Nakintu, Tel: +971 2 30 91 714, Email: mari1@haward.org
